- Salvation Army, a religious organization founded in England in 1865 as the Christian Mission by William Booth, which took the title of Salvation Army in 1878. Its design is to reach the poor and neglected classes by going to their haunts, attracting their attention by processions with songs musical instruments, and banners, and drawing them to halls or other places of worship, where the simple gospel of repentance, forgiveness, and redemption is preached. With this work various philanthropic labors have been joined, as house-to-house visitation and relief of the poor by officers usually two or three working together, who make their home in this destitute district and more recently the great scheme of Booth for national or world-wide relief of the poor and unemployed. When they [Russian government] do not screw they squander. J. B. ARKINSON, *An Art Tour*, p. 260 [Macr. 1873]

4. [*College Slang, U.S.*] To exact hard work from students, or to subject them to rigid examinations — to screw back (*Billiards*), same as *NAW*, I, 18 — screw-a-hill, *n* — screw'er, *n*

screw, *n* 1. A cylinder, usually of wood or metal, grooved or threaded in an advancing spiral on its outer surface, also, a hollow cylinder having such a groove or thread on its inner surface

The screw is called male or female according as its spiral is exterior, as in a wood-screw, or interior, as in a nut. A male screw may be used separately (see def 2), but a female screw is used always in connection with a corresponding male

1 Lag-screw 2 Wood-screw 3 Saw-screw 4 Cap-screw 5 Shoulder-screw 6 Square-head thumb-screw 7 Flat-head thumb-screw 8 Flat-head collar-screw 9 Chisel-point screw 10. Blended screw

anchored spiral The screw is used to exert great pressure or to overcome great resistance through a short distance

2. *Specif* (1) A cylindrical piece of metal with a thread of coarse pitch, used for fastening boards or the like in place or holding them together wood-screw'it. (2) A round metal rod with a thread, usually of moderate pitch and fineness, a dull point, and a head variously formed, for use in holding together metal-work, parts of machines, etc machine-screw'it. (3) A cylindrical part, as of a machine or tool, on which a screw-thread has been cut, as, the screw giving motion to the back-center of a lathe

The parts of the common screw are the head (usually nickel or grooved to receive a screw-driver or shaped to fit a wrench), barrel or stem, thread, and point

Screws are named (1) from the thing with which they are connected or attached, as, bed-screw, bench-s, coach-s, tire-s, etc (2) from the shape or character of the head as, cap-s. (having a square or hexagonal head), capstan s. (having a hole in the head to receive a turning-pin), conical s., countersunk s., grub s. (having a slot at the head end to receive a screw-driver but having no head), hexagon s., milled s., square s.; (3) from the shape or character of the thread, as, companions (having a hollow internal thread), double s. (having two parallel threads of the same pitch), exterior s. (a male screw) inside or interior s. (a female screw) quadruple s. (having four parallel threads), ratchet-s, right-and-left s., triple s., V-threaded s.; (4) from some other feature of construction as, collar-s. (having a collar on the stem), regulating s., winged s. (a thumb-screw) Other important screws will be found defined under the first element, as ARCHIMEDEAN SCREW, BALL-SEREN, COMPOUND SCREW, SKEIN-SCREW

Common Forms of Screws

1 Lag-screw 2 Wood-screw 3 Saw-screw 4 Cap-screw 5 Shoulder-screw 6 Square-head thumb-screw 7 Flat-head thumb-screw 8 Flat-head collar-screw 9 Chisel-point screw 10. Blended screw

3 Anything having the action of or resembling a screw *Specif* (1) A screw propeller, also, rarely, a vessel driven by a screw propeller (2) A spiral or screw-shaped shell, screw-shell (3) [*Gt Brit*] A small paper cone twisted at the end for holding tobacco, snuff, etc., also, such a package, as, a screw of tobacco 4. A twist or turn of a screw or resembling that of a screw; as, give the press another screw, a screw of a billiard-ball, etc 5. A steam-vessel moved by a screw propeller 6. *Math* A straight line or axis of given position combined with a definite linear magnitude or pitch, as for expressing the displacement of a rigid body in space. 7. [*Slang*] (1) An extortioner, miser, skinflint, as, no old screw (2) [*Slang, Gt Brit*] Salary, wages (3) Pressure, force, as, to put the screws on the poor. (4) [*College Slang, U.S.*] An instructor who exacts hard work from students, or who subjects them to severe examinations, also, the examinations themselves (5) [*Thieves' Slang*] A key, especially a skeleton key, also, a jailer 8. An amphipod; as, the sand-screw 9. [*Slang, Eng*] A tonic, a "brazer" 10. An implement used for loading cotton-bales into the hold of a vessel 11. A twist of limb or feature [*< OF. escroue, F. écrou, < L. scrobis, trench*]

— ad-justing-screw, *n* A screw for taking up wear, or for shifting the position of some movable piece, as in a machine — 3. loose, something wanting or improper in the arrangement or constitution of a thing, a defect, as, there is a screw loose in his management

When I see a man wear a flashy watch-chain I am pretty sure there is a screw loose or a wheel wanting about the fellow somewhere. C. CORRIE, *Coleb Kramle* p. 333 [L. & S. 1875]

— auxiliary s., a propeller-wheel for driving a sailing vessel when the wind is unfavorable — differential s., 1. A hollow cylinder having on its outer and inner surfaces threads of different pitch and reverse direction, the inner or female screw having playing in it a male screw, so that turning either the inner or the outer screw will make the other advance or retreat by an amount due to the difference in the pitches of the two male threads Hunter's s. 2. Any ordinary screw having two threads of different pitches on different parts of its length, and working as by the difference of their pitches — double-s., a. Having two screws said of a vessel — endless s. (*Mech*), a worm — flat s., a spiral thread cut in the face of a disk or other plane surface — hour-glass s. or Hindley's s., a worm having the form of an hour-glass, so that its thread may engage with a larger number of the teeth of a gear-wheel than a cylindrical worm — interrupted s., a screw having parts of its threads cut away so as to form slits or channels in the direction of its length used to close the breach of some canoes When of uniform diameter with simple longitudinal threads it is known as a slotted s.; when cut with a series of steps about its circumference, to fit into a corresponding stepped screw-box, it is a stepped s. — metric s., a screw whose pitch is expressed in some unit of the metric system instead of in inches or fractions of an inch — perpetual s. (*Mech*), a worm — plane s., a spiral channel or ridge on a plane surface, as a disk meant to effect, in a mechanism, a continuous motion — screw-alley, *n* Same as SHAFT-ALLEY — s-beam, *n* The seed of the spirally twisted pod of the screw-pod mesquite, also, the tree The pods are used for fodder, and the trees are excellent for bedges See MESQUIT and PROSOPIUS — s-shell, *n* A hollow cone with an internal thread which may be let down a bore-hole to recover a dropped tool — s-holt, *n* A holt threaded at one end for a nut — s-rod, *n* 1. A device having two or more internal cutting-tools for cutting external threads on a wooden blank 2. A screw-socket, as a screw-plate or an interrupted screw

hrech block — s-ram, *n* See PLANE SCREW, above — s-cap, *n* 1. A cover for a screw-head 2. A screw-threaded cap or cover — s-collar, *n* A threaded collar forming a device for adjusting the distance between the lenses of a microscope-objective — s-coupling, *n* A collar with threads on the inside at each end, for joining the ends of pipes, rods etc — s-cut, *n* A cut made in the manner of a screw-thread, a spiral cut — s-cutter, *n* A hand-device or machine for cutting screw-threads as a screw-cutting die, or the die and stock collectively, or a screw-cutting lathe — s-cutting, *1* *a* Used for making screw-threads, as tools or machines II. The act of making screw-threads in or on a holt, rod, or nut — s-cutting die, *1* A cutting-bit in screw-plate 2. By extension, a screw-plate — s-cutting machine, *n* A lathe for cutting screw-threads on rods, a screw-cutting lathe — s-die, *n* A die for screw-cutting — s-die, *n* A die for screw-cutting — s-die, *n* A die for screw-cutting — s-die, *n* A die for screw-cutting

2. To emit a piercing or prolonged sound, as a steam

whistle 3. To use heated language, whether in speech or writing [*< lee sl'rama*, scare]

Syn. see CALL ROAR

scream *n* 1. A loud, shrill, prolonged cry, generally indicating fear or pain, loosely, any loud call

The screams which accompany bodily suffering are indistinguishable from those which accompany suffering of mind and there are screams of passion as well as screams of delight

See *Principles of Psychology* vol. II, § 496, p. 541 [a 1883]

2. Any shrill sound, as the scream of a locomotive

scream *pp* Screamed

scream'er, 1 skrim'er, 2 serm'er, *n* 1. One who or that which screams, or who sings in a shrill voice

2. A South-American nuthatch bird, of doubtful affinities, the most nearly related to the ducks, having large feet and two spurs on each wing

The horned screamer (*Anhimahorned screamer*) has a long slender caruncle or horn on the top of the head. The crested screamers or chajás belong to the genus *Chauna*, as *C. carallata*, often reared by the natives to defend their poultry

The screamers possess a number of other marked peculiarities, the principal one being the absence of uncinated processes to the ribs, a condition not known in any other living birds

Knowlton & Ridgway *Birds of the World* 170 [in a co '09]

3. The serena crested screamer. 4. [Local, Brit] The swift 5. [Slang] Something of extraordinary qualities or character, something calculated to call forth screams of admiration, astonishment, or the like. 6. [Printers' Slang, U S] An exclamation-point

scream'ing, 1 skrim'ing, 2 serm'ing, *pa* 1. Uttering or emitting screams 2. Provocative of screams or of laughter, as, a screaming farce - scream'ing-ly, *adv*

screed, 1 skri, 2 ser, *n* [Prov] 1. A loose stool 2. Same as talus, 4 3. A preface [*< lee skrûtha*, landside]

screed, *n* [North Eng & Scot] A coarse sieve

screed, 1 skri, 2 ser, *v* 1. To utter with a screed, as, she screeded curses at him

II. 1. To cry out with a sharp, shrill, and strident voice, make a prolonged harsh, piercing sound; shriek; as, the night-owl shrieches [*< lee skrûtha*, shriek]

screech, *n* 1. A shrill, harsh cry, loud, strident sound; shriek, as, the screech of an owl or of a steam-whistle

Compere screed. 2. [Prov Eng] The screed-cock - screed'bird, *n* The fieldfare - s. cock, *n* [Prov Eng]

The misad-thrush - s. hawk, *n* [Local Eng] The nightjar - s. martin, *n* Same as screed, 3 - s. owl, *n* Any owl that shrieches instead of hoots (1)

The European horned (2) A North-American scops-owl, especially *Megascops asio* See *Illus.* under owl - s. thrush, *n* 1. The screed-cock 2. The screed-bird

screed'er, 1 skri'er, 2 ser'er, *n* 1. One who or that which shrieches 2. A picanon bird 3. The European swift

screed'ing, *pp* Screed

screed'ing, 1 skri'ing, 2 ser'ing, *a* [SCREECH'ING; SCREECH'ING] Resembling a screed, characterized by or addicted to shrieching, shrill and discordant, given to strutting to the utmost, as a voice, as, a screed'ing sound, a screed'ing hinge

screed, 1 skri, 2 ser, *vt* & *ti* 1. To rend or tear into shreds 2. [Scot] To talk off glibly [Var of SHRED, *r*]

screed, *n* 1. A prolonged tirade, harangue

The apothecary was going to write a long screed on suicide

Kipling *Life's Handicap*, End of the Passage p. 166 [MAY 1891]

2. Building A wooden strip or a strip of mortar laid on a wall at intervals, to gage the thickness of the plastering to be put on, so that the finished work may present a uniform appearance

floating screed. 3. A long torn strip or shred, hence, any detached strip or fragment the original meaning, now chiefly Scotch

He has been sometimes seen going about with hardly a shred to cover him

Chapman *Fairy Leg*, *Haunted Cellar* p. 107 [1800]

4. [Scot] A rending or tearing, rent, tear 5. A strip of land [Var of SHRED, *n*] skreed'ing, a screed o' drink [Scot] A supply of drink hence, a drink'ing-out - screed'ing coat, *n* A coat of plastering lined up with the screeds

screen, 1 skrin, 2 serin, *vt* 1. To separate or cut off from inconvenience, injury, or danger, shield from observation or annoyance with or as with a screen, as, a window screened from view by vines, a house screened from the wind, a criminal screened from justice by his friends

2. To pass through a screen or sieve, sift, as, to screen ashes or gravel 3. To show one a screen, as in motion picture Syn. see HIDE MASK, PALIATE SHELTER - screen'ing-ma-chine, *n* An apparatus for separating materials, as ores, by a rotating screen

screen, *n* 1. Anything that separates or cuts off, as inconvenience, injury, or danger (1) A thin structure placed before objects to conceal separate, or shield them sometimes a frame covered with paper or cloth, and usually movable, hence, any means of shelter, protection or defense as a door-screen a fire-screen a screen of leafy branches (2) Arch A partition, partition, or other construction, properly light, and permissibly latticed, or of open-work, dividing one part of a building, as a choir channel or chapel, from another, as, a choir-screen on organ-screen

2. (1) Hence, something resembling such a structure, as an outstretched canvas, on which motion pictures, images, or reading matter may be thrown as by an apparatus of the stereopticon class

Science is a screen on which we see projected the shadows of invisible powers J W Dawson in *Magazine of Christian Literature* Oct, 1890 p. 13

(2) Any device used to control the passage of light through a lens In photometry, such screens are named after their inventors as the Bunsen screen (white paper rendered transparent by paraffin), Crova's screen (admits only the yellow of the spectrum) Elster's (a cube of paraffin divided centrally by an opaque partition) July 5, (a cube of paraffin divided into two parallel plates) Methven's (a metal screen with a rectangular opening)

3. A sieve or riddle (1) A large, coarse sieve, as for sifting sand, gravel, ore, coal, etc (2) A perforated plate in

a stamp-mill or centrifugal roller-mill (3) One of a series of perforated plates or woven-wire structures for separating different sizes of coal (4) A framework of crossed wires or slats to prevent fish from passing in a stream

4. Elec & Magnetism A body through which electric or magnetic induction can not penetrate, as a hollow conducting sphere that protects objects within from the influence of a varying magnetic field without 5. In photoengraving, same as HALF-TONE SCREEN 6. [Scot] A large scarf or plaid sometimes worn as a head-dress by women 7. A detachment of troops sent to deceive an enemy as to the movement of the main column 8. Arch (1) A row of columns built in front of a house masking the facade (2) A dwarf wall, solid or pierced by trelliswork or mullions, separating parts of a church, as, choir-screen, rood-screen 9. Cricket Some as CANTAS, 1 (2) 10. Forestry A frame made of brush, etc, for the partial shading of a seed-bed [*< F écran*, OF *escrin*, screen, *ep* G *schranne*, railing, grate] serenete. Syn. see SHUTTER - armored screen, an interior, upright, thin armor-plate, designed to stop flying splinters from reaching the guns near by - fluorescent (Physics), a screen rendered fluorescent by the application of calcium sulfide or some similar substance - a plate 1. A plate of cast bronze or brass in a pulp-screen perforated with slit-like holes for straining pulp 2. Phot A plate combining in itself the color-filters required for taking and projecting a color image - orthochromatic s. (Phot), same as COLOR-SCREEN - solar s., a card used in connection with a surveyors transit to receive the sun's image as well as that of the cross-wires of the instrument

screened, *pp* Screened

screen'er, 1 skrin'er, 2 serin'er, *n* One who screens, to nny sense screen'man

screen'ings, 1 skrin'ing, 2 serin'ing, *n* pl The waste of anything passed through a screen or sieve (1) Milling Small or defective grains, as of wheat, screened out (2) Refuse coal

screes, 1 skriz, 2 serz, *n* pl Same as SCREE, *n* 1

screer, 1 skri, 2 ser, *vt* & *ti* [Thieves' Slang, Eng] To write or draw with colored chalk on pavements also, to write screes - screer, *n* A beggarletter - screer'er, *n* sereigh'of-day, *n* [Scot] Same as SCRAICH-O'-DAY

Screven, 1 skrev'en, 2 serv'in, *n* A county in central Georgia, 473 sq m county-seat, Savannah

screw, 1 skri, 2 seru, *v* 1. To tighten, secure, fasten, or press by means of a screw or screws, apply a screw to, twist or turn, as a screw, or in the same manner as a screw, as, to screw a hinge on a door, to screw up a loose bolt, to screw a gimlet into a block 2. To force as if by the action of a screw, subject to or move by strong pressure, effort, or exaction, urge, extort, as, to screw up courage, to screw consent from one 3. To press hard financially, as in business relations, treat with extortion, grind, as, to screw a debtor or a tenant, to screw down a tradesman 4. To twist out of shape or position, distort, contort, as, he screwed up his mouth in a droll fashion, eyes perpetually screwed up 5. To cause (a ball) to twist or move spirally, as in billiards, to arrest forward action, or, as in cricket, to bat (the ball) upward with a twisting motion 6. [College Slang, U S] To examine severely

II. 1. To turn or admit of being turned in the manner of a screw, as, this nut screws easily 2. To move with or as with twisting or spiral movements, twist about, also, to move with twisting or spiral action, as a billiard-ball, as, he screwed about uneasily 3. To practice oppression or extortion

When the [Russian] government did not screw they squander J B ATKINSON *An Art Tour* p. 260 [MAY 1873]

4. [College Slang, U S] To exact hard work from students, or to subject them to rigid examinations - to screw back (Billards), same as DRAW, I, 18 - screw'able'er, *a* - screw'er, *n*

screw, *n* 1. A cylinder, usually of wood or metal, grooved or threaded in an advancing spiral on its outer surface, also, a hollow cylinder having such a groove or thread on its inner surface

The screw is called male or female according as its spiral is exterior, as in a wood-screw, or interior, as in a nut A male screw may be used separately (see def 2), but a female screw is used always in connection with a corresponding male

The two used together 3. Saw-screw 4. Cap-screw 5. constitute one of the mechanism 6. Shoulder-screw. local powers, and one of the 7. Round-head thumb-screw 8. other of the components may 9. Flat-head thumb-screw 10. be regarded as a form of In Shoulder-head collar-screw 10. elined plane moving in on advancing spiral The screw is used to exert great pressure or overcome great resistance through a short distance

2. Specif (1) A cylindrical piece of metal with a thread of coarse pitch, used for fastening boards or the like in place or holding them together wood-screw'it. (2) A round metal rod with a thread, usually of moderate pitch and fineness, a dull point, and a head variously formed, for use in holding together metal-work, parts of machines, etc ma-chine-screw'it. (3) A cylindrical part, as of a machine or tool, on which a screw-thread has been cut, as, the screw giving motion to the back-center of a lathe

The parts of the common screw are the head (usually nicked or grooved to receive a screw-driver or shaped to fit a wrench), barrel or stem, thread, and point

Screws are named (1) from the thing with which they are connected or attached, as, bed-screw, bench-s, coach-s, tire s, etc (2) from the shape or character of the head as, cap-s, (having a square or hexagonal head), capstans, (having a hole in the head to receive a turning-pin), conical s, countersunk s, grub s, (having a slot at the head end to receive a screw-driver but having no head) hexagon s, milled s, square s; (3) from the shape or character of the thread, as, companion s (having a hollow internal thread), double s, (having two parallel threads of the same pitch), exterior s (a male screw) inside or interior s (a female screw) quadruple s, (having four parallel threads), rate-hat s, right-and-left s, triple s, V-threaded s, (4) from some other feature of construction, as, collar-s, (having a collar on the stem), regulating s, wind s (in thumb-screw) Other important screws will be found defined under the first element, as ARCHIMEDIAN SCREW, NALL SCREW, COMPOUND SCREW, SKEIN-SCREW

K. V. ZIMMERMAN *New York Tribune* Mar 29, 1892 p 1 col 2 seal, n 1. An instrument or device, as an engraved metallic plate or stone, sometimes set in a ring used for making an impression upon some tenacious substance, as wax or wafer, when attached to a parchment or paper, either in attestation of the genuineness of the instrument and the deliberation with which it is executed, or to fasten it 2. The impression made by such means upon the wax or wafer affixed to an instrument, or directly upon the facsimile seal of the substance of the instrument, as an Anglo-Norman seal, also, in law, the word "seal." Borough of Southampton the letters "L S." (*Locus Sigilli*, ton, England place of the seal), or any other device having the effect of a common-law seal

A seal such as is known to the common law, is defined to be an impression upon wax, or some tenacious substance capable of being impressed

W. A. B. *Am Law of Real Property* vol. II, p 571 3. The wax or wafer affixed to a document to be impressed, also, a disk of paper used for the same purpose, or a mere impression, scroll, or mark on the paper

The use of seals for authenticating or closing up documents dates from remote antiquity. It has lately been held in England that neither wax, wafer, nor even an impression is necessary to the sealing of a deed, but only the use of something intended for a seal. By a statute of the United States an impression directly on the paper is sufficient as a seal, wherever a seal is necessary. In many States a scroll-seal is held to be valid even in the absence of a statute, and the tendency is by statute to render the use of seals unnecessary, except by corporations

4. **sea'serp'pent**, 1 sē'sūr'pēnt, 2 sē'sūr'pēnt, *n* 1 An animal, of snake-like form and monstrous size, believed by many to inhabit the ocean singly or in very limited numbers and varying much in general appearance according to the descriptions given  
It has never been captured, altho asserted to have been seen in repeated instances Some of the recorded credible observations of so-called sea-serpents apparently relate to well-known animals, as ribbon-fishes, basking sharks, etc A few zoologists believe that the animals seen by some observers are plesiosaurs or other large marine reptiles generally supposed to be extinct  
While with very few exceptions, all the so-called sea-serpents can be explained with reference to some well known animal or other natural objects there is still a residuum sufficient to prevent modern zoologists from denying the possibility that some such creature may after all exist

3. In business transactions, n counter-claim or debt; counterbalancing debt, cross-debt  
The business of the whole world is largely done increasingly done by the use of a commercial expedient called set-off, by which one debt is made to pay another debt.  
PENAR Point Eon p 359 [s 1874]

4. Arch A ledge or projecting part of a wall caused by a reduction of the thickness of the wall above, an offset, 5 Print. A smut transferred from a freshly printed surface to another sheet, or to the second side of the same sheet, as through the medium of a smutted tympan. The action of thus smutting is often called setting off.

6. Law A counter-claim or cross-demand set up by a defendant, especially, a debt due from a plaintiff to defendant, which the latter sets up to reduce or defeat the plaintiff's demand, or to recover judgment for any balance that may be found to be due from the plaintiff. This doctrine, which has its origin in equity practice, was unknown to the common-law courts until the passage of the act of 2 Geo II c 22, which provided for the reduction or defeat of a plaintiff's claims by the defendant upon the proof of a just claim on his own account against the latter, this statute, with certain modifications, having been adopted generally by the United States. In some States a defendant is bound to set up a set-off if one exists, and right of action is barred in case of failure to do so. Set-off can take place only in actions on contracts for the payment of money, and an unliquidated claim can not be set off against one which is for a liquidated amount. Furthermore, the facts constituting the defendant's claim must be pleaded in bar or presented in evidence as if they concerned an independent action. Compare RECOURSE - set-off sheet (*Print*), an oiled paper sheet spread over the tympan of a press, or a blank sheet interposed between printed sheets, to prevent set-off, also, tissue-paper over an engraving in a book.

Myth*), a legend, subject of one of the tragedies of *Eschylus*, according to which Thebes, the chief city of Boeotia in Greece, was besieged by the seven great heroes Adrastus, Polyneices, Tydeus, Amphiaras, Capaneus, Hippomedon, and Parthenopaeus, with the object of restoring Polyneices, son of Oedipus who had been expelled by his brother Eteocles. The brothers slew each other in single combat, and all the other heroes perished except Adrastus — the s. bishops (*Eng. Hist.*), the seven English bishops who declined to read the declaration of indulgence published by James II and were imprisoned by him for non-conformity. They were tried, but finally acquitted in June, 1688. They were Archbishop Sancroft, and Bishops Lloyd, Turner, Ken, White, Lef, and Trelawney — the s. champions of Christendom, in medieval legend, the name given to the seven national saints St. George of England, St. James of Spain, St. Anthony, of Italy, St. Denis, of France, St. David of Wales, St. Patrick, of Ireland, St. Andrew, of Scotland — the s. chief virtues, faith, hope, charity, prudence, temperance, chastity, and fortitude — the s. deadly sins, pride, covetousness, lust, anger, gluttony, envy, and sloth — the s. gifts of the Spirit, wisdom, counsel, understanding, fortitude, knowledge, godliness, and godly fear — the s. sleepers, in medieval legend, seven Christian youths of Ephesus who during the persecution under Decius (A. D. 249-251), hid themselves in a cave and there fell into a miraculous sleep that lasted 196 years — the s. stars, 1. The Pleiades. 2. The constellation of Ursa Major — the Dipper. 3. The seven planets known to the ancients — the s. wise masters, the narrators of a series of tales by means of which Lucien the son of a Roman emperor who was wrongfully accused by his stepmother was saved from death. In order to gain time to establish his innocence the prince's seven tutors told each a story upon seven consecutive nights, at the end of which time the prince proved himself innocent and the stepmother was put to death. Several medieval versions of the stories are extant — the s. wonders of the world, either of two groups of seven famous buildings or works of art variously enumerated but commonly including (1) in antiquity the Egyptian pyramids the hanging gardens of Babyln, the temple of Diana at Ephesus the statue of Zeus by Phidias at Olympia the Mausoleum at Halicarnassus the Colossus of Rhodes and the Pharos or lighthouse at Alexandria (2) in the middle ages the Coliseum at Rome the catacombs of Alexandria the great wall of China the Druidical temple at Stonehenge, England, the leaning tower of Pisa the porcelain tower of Nanking, and the mosque of St. Sophia at Constantinople.

A framework consisting of a board having on one side two upright columns connected at the top by a crosspiece between which and the base are stretched cords to which the sections of a book are sewed in regular order. — *sew*'ing-table, *n*. A table to hold materials and instruments in sewing. 2. The table on which the sewing-press of a bookbinder is placed.

**sew**'ing-ma-chine, 1 sū'ing-mā-shin, 2 sū'ing-mā-shin, *n*. A machine for sewing. (1) A machine for stitching ordinary fabrics, usually mounted on a table and worked by a treadle.

The most important device in connection with this machine is the needle invented by Elias Howe (1846), the eye of which is near the point. By this (in a double-thread machine) the thread is taken in a loop through the fabric to be sewed, then a bobbin, enclosed in a small shuttle, carries a thread through the loop, after which the needle (which pierces the fabric) is withdrawn by the upward action of the lever to which it is attached. The fabric is then moved along a slight distance so as to be ready for another stitch. Various kinds of stitches are made by different machines, as the *chain-stitch*, the *interlocking stitch*, and the *lock-stitch*, this last being the firmest and most desirable for enduring work.

(2) A machine used in bookbinding for sewing the sections of a book together.

— *cylin*-dered sewing-machine, a sewing-machine in which a cylinder arm is substituted for the customary bed-plate used in heavy work such as large garments and shoes — *hand* s., a small machine worked by the hand with a crank, or a simple machine with two jaws working like scissors, one of them carrying the needle and thread and the other a looping-hook and bobbin s., a hand, a device in some sewing-machines by which the loop of the thread is pulled out and kept open below the fabric till the stitch is formed — *s.* needle, any needle with the eye near the point and fitted for use in a sewing-machine

**sew**'ing-silk, 1 sū'ing-silk, 2 sū'ing-silk, *n*. Finely

**sex**, 1 seks, 2 seks, *n*. To characterize, mark, or label as

being male or female. find and indicate the sex of

**sex**, *n*. 1. The physical difference between male and female

animals, the character of being male or female, the possession of reproductive organs as in particular kind,

differentiation in the functions of the reproductive organs. Sex is the most nearly universal single feature of the animal kingdom. In the lowest forms sex is absent, altho

the objects of sex are attained by processes fundamentally similar to those in sexual reproduction. Reproduction in animals possessing sex consists of the fusion of two reproductive or germ cells. The male cell — the spermatozoon —

is formed in the male reproductive organ, the testis, the female cell — the ovum — in the female reproductive organ, the ovary. In order to bring about the union of these cells, the external generative organs are often highly differentiated, and this is accompanied by widely differing physiological and psychological characteristics. Many animals are hermaphrodite, altho self-fertilization is the exception, and this condition has probably developed secondarily.

Analysis of the finer details of sexual reproduction shows that the ripe germ-cells of each sex contain exactly one-half the nuclear material normal to a body (somatic) cell of the individual, and that the fusion of spermatozoon with an ovum results in a cell, the nuclear matter of which is equivalent to the nuclear matter found in a somatic cell, but derived from two individuals. Sex tends to bring about cross-fertilization, which, as the whole, seems to be an advantage to the race. See **HERMAPHRODITE**, **HERMAPHRODITISM**.

In botany the term *sex* is by analogy applied to the differences in the reproductive organs of the higher plants. The staminate organs which produce the pollen correspond to the male sexual organs in animals, the pistillate organs, which produce the ovule, correspond to the female sexual organs. Hermaphroditism is common, the stamens and pistils occurring in a single flower (monocelous) in most plants, while the occurrence of pistillate flowers in one plant and of staminate flowers on another is rare (dicelous).

2. Either of the groups into which organisms are thus divided; males or females of a group, collectively, especially, men or women. 3. Women in general, woman-kind as distinguished from man generally with the definite article, as, a devoted admirer of the *sex*.

— *For* *spare food* youth! thy sorrows hush,

And spurn the *sex*, he said

shark', *vt* To fish for sharks, as, to go sharking. shark', *n* A plagiostomous selachian, having lateral gill-openings. Sharks are mostly of the high seas, and are found mainly within the tropics. Some pelagic species attain a great size, and many are armed with powerful teeth and are noted for their voracity. Others, as the whale shark and hasking s., have small teeth and prey on small fishes and invertebrates. The most formidable of the man-eating sharks is an isurid, the great white s., or man-eater (*Carchodon carcharias* or *lenticulus*) of warm seas, sometimes 40 feet long, and occasionally found off the coast of the United States. Other formidable species are the tiger s. and species of *Carcharias*, as the great blue s. (*Carcharias glaucus*), which extends into the temperate zone belonging to the *Goleidæ*. The common dusky s. (*C. obscurus*) of the Atlantic coast of the United States is harmless. *Shin'to*, 1 *shin'to*, 2 *shin'to*, *n* The primitive cult of Japan, in its essence a species of ancestor-worship  
*Shinto*, largely superseded or rather absorbed by Buddhism, traces its roots to the 6th century A D, has had a revival since the revolution of 1868, and is still a living power among the people of Japan It seems to have been originally a delineation of the forces of nature which later became identified as hero ancestors It has its own divinities temples, priests, worship, and rites But its central belief is implicit obedience to the Mikado as the divine descendant and actual representative of the sun-god, Amaterasu In the form in which it is held by some educated Japanese, it is practically deism  
*Shinto* is thus a mixture of ancestor-worship and of nature-worship without any explicit code of morals It regards human beings as virtuous by nature, assuming that each man a co-equal as his true guide and while believing in a continued existence beyond the grave, esteems the use of the senses to its pleasures or pains

present words and sentences in graphic outline an art employed in some form even in the time of the ancient Romans: opposed to *longhand* See *STENOGRAPHY*

In the English language the number of simplified alphabets used to facilitate such abbreviation has been very great — 201 having been invented and more or less used from the beginning of the 17th century, when the art was revived after having been for centuries disused, to the year 1837, when Isaac Pitman introduced his system, called by him at first *stenographic sound-hand*, and later *phonography* Since then about 300 more, many of them based upon Pitman's or proceeding along similar lines, have been devised In modern classifications of shorthand a system in which the *a b c* alphabet is used, and the shortening effected by arbitrary contractions and symbols, is properly *stenography*, while a system in which elementary sounds are expressed phonetically by arbitrary signs, used singly or in combinations, is called *phonography* A joined and simplified form of phonography is also known as *tachygraphy* (See these words) The illustration shows the signs for several consonants used in eight English systems, one French, and one German As to these systems and their authors Willis was the second author who published a book on shorthand (Bright, 1588, being the first), Pepsys used Shelton's system in writing his *Diary*, Gurney's system was founded on Mason's and used in parliamentary reporting, Townsend used stroke vowel-signs, and Cossard's system is still the basis of French stenography, which differs widely from English systems The German systems are mainly cursiva In the United States, a modification of the Isaac Pitman system was introduced by his brother Benn Pitman A non-Pitmanic system was devised by John R. skin, n. 1. The membranous external investment of an animal, the integument

In vertebrates the skin consists of two layers, a superficial non-sensitive and non-vascular ectodermal layer (the epidermis), cuticle, or scarf-skin) and a deeper sensitive and vascular mesodermal layer (the corium, cutis, true skin, or dermis) In the epidermis a deeper mucous layer (the protoplasts) and in the dermis a deeper muscular layer (the muscle fibers) The matrix for the regeneration of the outer layer of horny cells, which scales off continually

The corium, which contains both blood-vessels and nerves, consists of a densely interwoven network of connective-tissue fibers and many elastic fibers the latter of which permit it to return to its normal condition after it has been raised up in a fold. The corium of certain animals may be converted by treatment with substances rich in tannic acid as oak-bark, and thus has an important part in the industries. The accessory organs of the skin are the sweat-glands through the orifices of the ducts of which exudes the perspiration secreted by these glands (see GLANDS) the sebaceous glands, most of which lie close to the

**snake, n.** 1. An ophidian reptile, a serpent  
 Soakes differ from lizards chiefly in having a greatly elongated body in the absence (with rare exceptions) of limbs or limb-protuberances and in having a specialized swallowing-apparatus. The skull is loosely composed of the bones, especially of the lower jaw, which suspend the head by elastic ligaments, admitting of the deglutition of relatively large objects. The teeth are numerous, small, conical, recurved and not used for chewing the animal seizing its prey and swallowing it by gradually advancing its hold. This process is aided by a copious flow of saliva. The bite of most snakes is painful, but in the latter part of the century some of the vipers, coral-snakes and sea-snakes there have been developed much enlarged fangs hollow or grooved, with which a stinging bite may be inflicted. These fangs are connected with a venom-glands from which a deadly poison flows into the punctures they make. The skin of serpents is covered with scales or scutes, which are arranged in a regular order and of osteoderms. This skin is sloughed off at intervals (annually in adult individuals) permitting growth. The nervous system of ophidians is highly organized, their senses are keen, and they display considerable intelligence and tamability. The eyes are large and clear the ears altho

C Honor On *Romans* p 237 [w m 1858]  
2. Polit Sci The supreme power in a state, the original, absolute, and universal power by which all persons and things in a state are controlled and determined  
The theory of modern political science is that sovereignty resides in the people, and that government is merely the agency by which it is exercised In some countries, however, as in Russia sovereignty continues to be identified with the autocratic power of the emperor In many states, such as England and Germany, sovereignty is nominally predicated of the monarch, but in reality he does not possess it In the United States the question whether sovereignty resided in the people of each separate State, or in the people of the United States long divided schools of political thought and opened the way to the Civil War  
The acts of the state by which governments are made and on-made are termed acts of original sovereignty

spargery, *n* [Prov Eng] The sparrow-hawk

spargi-dae, 1 spa-rj-dē, 2 spa-rj-dē, *pl* Ich A family of acanthopterygian fishes, especially *Percoidea* with spinous dorsal depressible in a groove, maxillaries retractile under preopercles, and palates unarmed, as in the gilthead porgy, sheepshead, and sailer-schole [*< SPARTUS*] — spargi-dae, 1 spa-rj-dē, 2 spa-rj-dē, *pl* Spargoid

spargi-ling, 1 spa-rj-līng, 2 spa-rj-līng, *a* 1. Of limited supply, restricted in degree or amount, scanty, scarce, slight, as, sparing efforts 2. Bent on saving, frugal, chary; close, stingy 3f. Merciful, forgiving — *ly*, *adv* — *ness*, *n*

sparing, *n* 1. The act of one who spares, especially, parsimony, frugality, economy 2. *pl* [Rare] That which is spared or put aside, savings 3f. The state of being spared, as from death or injury Syn. see FRUGALITY

spark, 1 spōrk, 2 spōrk, *v* 1. To emit in a scintillating manner, throw out as sparks

To spark out little beams, like stars in foggy night

2. [Prov Eng] To hesperate with dirt 3. To operate on or affect by the electric spark, as, the insulator was sparked through

II 1. To sparkle or emit sparks, glisten, scintillate, also, to emerge or gleam forth like a spark

Every now and then a flying-fish would spark out from the unruffled bosom of the heaving water

2. Elec To form small arcs or electric sparks, as at the commutator end of a dynamo 3. In an internal-combustion engine, to have the electric ignition operating [*< AS sporcian, < sporcio, spark*] — sparkling-point, *n* The end of the spark-producing mechanism for ignition of the combustible gases of an engine — sparkling potential (Elec), the potential in air and other gases at which it is possible to obtain a discharge, the minimum sparking potential being that below which this is impossible

spark, *v* [Colloq] 1. To visit or escort as an admirer or accepted lover, court II 1. To play the spark, woo

spark, *n* 1. An incandescent particle thrown or driven off from any incandescent body, especially, a burning particle from a body in combustion, or remaining from a fire, as, sparks from red-hot iron; the sparks flew up the chimney

Behold all ye that kindle a fire, that compass yourselves about with sparks walk in the light of your fire and in the spark that ye have kindled

3. Any glistering or brilliant point, particle, or emanation

3. Hence, any thing that kindles or animates, as, a spark of life, a spark kindling a rebellion

Three fatal sparks, have set the hearts of all on fire

4. Elec Properly, the luminous effect of a disruptive discharge, or the discharge itself (see MISCHARGE), especially when its ramifications are not numerous enough to be called a brush, loosely, a small transient arc or an incandescent particle thrown off from such an arc

The length of the true spark varies with the difference of potential of the conductors between which the discharge takes place and with the nature and density of the separating medium It can not pass in a very rare medium Its

light is due chiefly to incandescence of the medium in the path of the discharge Compare ROENTGEN RAYS 5. A small diamond or bit of diamond used in cutting glass, etc 6. Hence, in slang, diamonds generally, or any brilliant stone in jewelry [*< AS sporcio, spark*] — fairy sparks, emissions of phosphorescent light, as from decayed vegetation — side-spark, *n* An electric spark in the air-space of a Hertz receiver — spark-arrest'er, *n* 1. A spark-catcher, as on a locomotive 2. Physics An electrical apparatus to prevent injurious sparking at the opening of a circuit made and broken frequently — *s*, axis, *n* Elec The imaginary line joining the spark-halls of a resonator — *s*, ball, *n* Elec The rounded terminal of an induction-coil or transformer at which sparks are given off — *s*, knob — *s*, box, *n* In a locomotive, a receptacle for sparks, etc, deflected by the spark-arrest'er — *s*, catcher, *n* A cone or a netting in a locomotive-stack to prevent escape of sparks and clinders — *s*, coil, *n* 1. Same as SPARK-ARRESTER, 2. A coil in a system of electric gas-lighting for increasing the self-induction of the circuit so that a spark will pass when the circuit is broken 3. Elec An induction-coil used with an internal-combustion engine, wireless telegraph equipment, etc, to secure sparking — *s*, condenser, *n* Physics A glass case through the ends of which the terminals of an electric circuit may discharge in a medium under control of the operator, from which the effects of atmospheric changes may be excluded — *s*, consumer, *n* A spark-catcher — *s*, counter, *n* Elec A device for registering and timing sparks, in which each discharge pierces or marks a paper tape, while a pendulum opens and closes an electric circuit to fit the number of punctures or marks per second — *s*, deflector, *n* A device in a locomotive for deflecting the course of solid particles carried through the flues by the draft — *s*, eyed, *a* Bright-eyed — *s*, gap, *n* Elec The space leaped over by a spark *n* variable part of the regulating shunt-circuit of a self-regulating X-ray tube, by means of which the vacuum in the tube may be brought to and maintained at the desired state Compare ROENTGEN RAYS — *s*, hopper, *n* A hopper for catching sparks, as below the smoke-hot extension of a locomotive — *s*, instant, *n* Elec The precise moment when a spark crosses the space between terminals in a cylinder — *s*, length, *n* Elec The space covered by an electric discharge across a spark-gap — *s*, line, *n* This controller for spark-ignition — *s*, netting, *n* A netting serving as a spark-catcher — *s*, resistance, *n* The resistance exerted by the air-path traversed by a spark *n* crossing this gap, representing the energy expended in the spark — *s*, telegraph, wireless telegraphy — *s*, tube, *n* A tube attached to an apparatus for exhausting the bulbs of incandescent lamps as a gauge to indicate, by the refusal of a spark from an induction-coil to pass through the tube, when the exhaustion is sufficient — *s*, voltage, *n* Elec The potential to which a condenser or transformer yielding the spark is charged — *s*, wiping, *s* or wiper, *n* A spark secured by bringing together and then parting two electric terminals

spark, *n* 1. One of sprightly and mercurial character; a dresy man (or formerly, at times, a woman) fond of gsetsy and gallantry, a rollicking fellow 2. [Colloq] A lover, suitor, gallant [Cp lee spark, lively, sprakli, dandy]

sparked, 1 spōrk, 2 spōrk, *a* [Prov Eng] Vane-sparked, 1 spōrk, 2 spōrk, *a* [Local, U S] Streaked or variegated in the back said of birds

spark'er, 1 spa-rk-er, 2 spa-rk-er, *n* 1. An electric spark-arrest'er 2. One who or that which sparks, as a spark-plug

spark'ish, 1 spa-rk'ish, 2 spa-rk'ish, *a* 1. Jaunty, sly gay 2. Showy, fine well-dressed — *ly*, *adv* — *ness*, *n*

spark'le, 1 spa-rk'le, 2 spa-rk'le, *v* [SPARK'LE, SPARK'LE, SPARK'LE] 1. To emit with a momentary and brilliant flash 2. [Prov Eng] To disperse, scatter 3f. To besprinkle

II 1. To emit sparks 2. To flash as with sparks, glisten brilliantly, twinkle, as, the sparkling heavens, sparkling conversation 3. To effervesce with glistening bubbles, or to contain much carbon dioxide, as certain wines [Freq of SPARK, *v* 1 Syn. see SHINE

sparkle, *n* 1. Any luminous, incandescent, or burning particle, *n* spark, plenum; glitter 2. The act or condition of sparkling, brilliancy, luster

There was a positive sparkle and atmosphere of holiday sunshine about him CHARLES AND MARY C CLARKE *Recollections of Writers* Dickens p 319 [6]

3. The presence of carbon dioxide, as in a wine, causing effervescence and imparting a lively taste

sparkle-her'ry, *n* Same as FARKLEBERRY

spark'ler, 1 spa-rk'ler, 2 spa-rk'ler, *n* 1. One who or that which shines in a sparkling manner, specif., any sparkling gem, especially a diamond 2. A tiger-hetle (*Cicindela*) 3f. One who scatters or squanders, *n* spendthrift

spark'less, 1 spa-rk'less, 2 spa-rk'less, *a* Free from sparks, not throwing off sparks, especially, not sparking, as a dynamo commutator — spark'less-ly, *adv*

spark'let, 1 spa-rk'let, 2 spa-rk'let, *n* [Rare] A minute spark or sparkle

spark'li-ness, *n* Sprightliness vivacity

spark'ling, 1 spa-rk'ling, 2 spa-rk'ling, *pl* 1. Giving out sparks or flashes, glittering, figuratively, brilliant, vivacious, as, sparkling wit 2. Containing carbon dioxide caused by fermentation subsequent to bottling and of wines Syn. see BRIGHT — spark'ling-ly, *adv* — spark'ling-ness, *n*

spark'plug, 1 spa-rk'plug, 2 spa-rk'plug, *n* A device for igniting the charge in an internal-combustion engine through the agency of an electric current See JUMP-SPARK IGNITER, MAK'F-A-ND-BREAK IGNITER

Sparks, 1 spōrk, 2 spōrk, *n* [1879-1880] An American editor, historian, and educator president of Harvard University (1884-1885) *Life of George Washington*

spark'ling, 1 spa-rk'ling, 2 spa-rk'ling, *n* [Prov Eng] 1. A smelt 2. A parrot 3. A tern — spark'ling-fowl, *n* The meranser

spark'le, 1 spa-rk'le, 2 spa-rk'le, *n* 1. The calf of the leg

spark-man'ia, 1 spa-rk-man'ī-a, 2 spa-rk-man'ī-a, *n* A genus of tillaceous shrubs and trees for having heart-shaped toothed or lobed leaves screwing and white flowers in terminal clusters The stamens of the outer series are without anthers and the globose capsular fruits are covered with spines *S. africana*, the African hemp, is a greenhouse favorite [*< A Spormann Swedish naturalist*] — spa'roid, 1 spēroid or spa'roid, 2 spa'roid or spa'roid (xiii)

I o Of or pertaining to the *Sparidae* II n One of the *Sporidia* [*< L sparus* (see SPARUS) + -oid]

spare'pili, *tr* Same as SPANBLE

spare't, *tr* To spar or holt

spare't, *n* A spar-holt or timber

spare't, *n* 1. A spar, 2. A spar, *n* One who spars, *n* This act or practise of boxing, as hy pugilists

It must be remembered that *sparring* is, by its very name, a 'science of self-defence'

T W HIGGINSON *Out-Door Papers*, Santa p 24 [r & r 1863]

spare'ring, *n* Naut Batten secured, fore and aft, on the reverse frames, for supporting cargo

spare'row, 1 spa-rō, 2 spa-rō, *n* 1. One of various small plainly colored fringillid birds, usually with streaked plumage, especially of the genus *Passer*, as the common European house-sparrow (*P. domesticus*), noted for its attachment to human dwellings, its prolificness, and its pugnacity It is familiar in Europe, N Africa, and Asia

as far as Cochinchina in the United States It is known as the English s., and was first introduced into Brooklyn, about 1851, whence it has spread over most of the States and Canada It rises three or four broods each season, is destructive to grain, fruit, and blossom and is regarded as a pest The fox-s., chipping-s., field-s., Peabody bird or white-throated s., and the song-s. are among the North-American species

2. Some other singing bird like or likened to those described above, as, the European hedge-sparrow, the Java sparrow 3. [Local Slang, U S] A park policeman [*< AS sporcio, sparrow, < root of SPUR*] — spar-owt, *a* — *n* — *na* — *las* — *ka* — spar'row, *n* A sparrow (*Passerculus sandwichensis*) of the northwestern coast of the United States a variety of the common savanna-sparrow STURGE *Birds of North America* p 154 — *artemisia*, *n* A sparrow (*Poepoia nevadensis*) of North America — *black* — *chinned* s., a sparrow (*Spizella atrigularis*), chiefly Mexican, but occasionally found in the southwestern United States — *black-hooded* s., a sparrow (*Zonotrichia querula*) of Missouri and adjacent regions — *black-throated* s., a ground- or shrub-sparrow (*Poepoia bilineata*) of the southwestern United States — *Brewer's* s., a small field-sparrow (*Spizella breweri*) of the western plains — *Ipswich* s., a sparrow (*Passerculus princeps*) of Sable Island, originally described from an estray caught at Ipswich, Mass — *Lincoln's* s., a small American sparrow (*Melospiza lincolni*) — *Oregon* s., a song-sparrow (*Melospiza melodia*) of the Oregon and British-Columbian coast-regions generally thought to be the most northerly of the song-sparrows — *gray* — *song* s. — *seashore* s., *n* A sparrow of southern California (*Passerculus rostratus*), living in the sedge-grass and feeding on marine insects and seeds (thrown up by the tide breakers) s., San Diego s., *n* — *skylark* s., *n* A sparrow (*Passerculus grammacus*) of the northwestern plains of the United States a variety of the common field-sparrow

spare'row-bill, *n* 1. A sparrow's bill 2. A sparrow's sparrow-bill, *n* a shuttle, *n* [Eng] A wide-mouthed jar hung near a thatch and designed as a nesting-place for sparrows used in rural districts to keep sparrows from nesting in the thatch — *s*, dust, *n* [Colloq] Shot small enough for shooting sparrows — *s*, grass, *n* Asparagus a 17th-century corruption still in colloquial use — *s*, owl, *n* A small owl, especially the European *Glaucidium passerinum* — *s*, tongue, *n* Knot-grass — Texas s., a finch (*Arremonops rufirostrata*) found in Mexico and southern Texas — (H)arks, *n* A sparrow (*Passerculus savanna* or *P. anthinus*) which frequents the marshes of the Californian coast a variety of the common savanna-sparrow — *white-crowned* s., a sparrow (*Zonotrichia leucophrys*) of North America having a white crown bounded by black stripes and white-handled wings

western white-crowned s., *Zonotrichia gambeli*, a variety found west of the Rocky Mountains — *yellow-winged* s., a sparrow of the genus *Ammodramus*, specif., the grass-hopper-sparrow

spare'row-hawk, 1 spa-rō-hēk, 2 spa-rō-hak, *n* A small falconoid bird that preys on sparrows or other small birds (1) A short-winged hawk of the section Accipiter of the genus Accipiter, with tarsus feathered about one-third down in front and feathers well spread behind, especially the European *A. nisus* The colored sparrow hawk of Australia is *A. torquatus* (2) An American falcon of the section *Tinnunculus* of the genus *Falco*, especially the North-American *F. sporcyus* with head slaty blue hack rufous, tall bright chestnut, the under parts white and the body and tail spotted or barred, according to sex It preys upon small birds and insects, as the locust and grasshoppers (3) A New Zealand falcon (*Hieracidae novezeelandiae*) (4) The kestrel [*< AS spearhawke, < sporcio, sparrow, & hawke, hawk*]

Sparrows Point, 1 spa-rōz, 2 spa-rōz, *n* A town in Baltimore county, Md

spare'row-tail, 1 spa-rō-tēl, 2 spa-rō-tāl, *n* 1. A Cut in the shape of a sparrow's tail II n Something so cut, specif., a sparrowtail or swallowtail coat

spare'row-wort, 1 spa-rō-wōrt, 2 spa-rō-wōrt, *n* Any one of the heath-like shrubs of the South-African genus *Proserpinaca*, of the family *Thymelaeaceae*, also, a South-African heath (*Erica passerina*) resembling these

spare'ry, 1 spa-rj, 2 spa-rj, *a* Of abounding in or like sparrows (from (ore), same as SPARITE — *s*, limestone, a coarse species of crystalline marble

spare'sat, 1 spa-rē-sat, 2 spa-rē-sat, *n* Zool Sparse

spare'set, *n* To disperse, spread abroad scatter

spare, 1 spōrk, 2 spōrk, *n* [SPARK'ER, SPARK'EST] Scattered at considerable distances apart, thinly diffused, not dense [*< OF. sparsa, < L spargo* (pp *sparsus*), *scatter*] — *spare'set*, *adv* — *spare'set-ly*, *adv* — *spare'set-ness*, *n*

spare'sile, 1 spa-rē-sil, 2 spa-rē-sil, *n* Sparse [*< LL sporsilis, < L sporsus* see SPANSE *a*] — *sparsile* star (*Astron*) a star not included in the figure of any constellation a designation no longer employed, as the boundaries of constellations are now so drawn as to leave no interspaces

spare'si-ty, 1 spa-rē-si-ti, 2 spa-rē-si-ty, *n* The condition of being sparse

spart, 1 spōrt, 2 spōrt, *n* 1. Esparto 2. A marsh-grass (*Spartina stricta*) [*< L spartum*, see SPARTUM]

effect is produced by reflection from or passage through a diffraction grating. (See **DIFFRACTION**.) Instead of being received on a screen, the spectrum may be viewed directly with a telescope. (See **SPECTROSCOPY**.) The spectrum is not limited to the visible part. There is an invisible spectrum below the red (the *infra-red spectrum* or *dark heat spectrum*) and above the violet (the *ultra-violet spectrum*), both of which can be detected by photography and by other physical processes. Different media disperse the rays in varying degrees in different parts of the spectrum, while the gratings do not, hence the spectra due to refraction are called *abnormal*, and those due to diffraction *normal*. Solid and liquid bodies, when incandescent, give out *continuous spectra*, gaseous bodies give out *line bands*, or *fluted spectra*, according to the degree of their density. If light from an incandescent solid passes through gas at a lower temperature or through some solids and liquids, some rays are absorbed, producing *absorption spectra*. See **PHOTOPHYSICS**.  
2. An after-image 3f. An apparition [L. see **SPECTER**]  
— **absorption spectrum**, the spectrum of light that has undergone selective absorption by passing through a gas or other partially transparent medium commonly characterized by dark lines showing the wave-lengths of the absorbed light — actinic s., a spectrum consisting only of the actinic or ultra-violet rays which are especially capable of chemical action — atmospheric s., the spectrum formed by the dispersion and refraction of a beam of light by its passage through the atmosphere — band s., a spectrum apparently composed of dark or bright bands, intense at one edge and fading off toward the other. Powerful instruments show that each band is made up of many fine parallel lines, very close together at one edge of the band, the distances apart regularly increasing toward the other. Absorption spectra show dark bands that can not be resolved into lines — channelled s., same as **FLUTED SPECTRUM** — chemical s., same as **ACTINIC SPECTRUM** — chromatic s., a spectrum consisting only of the visible rays, the different wave-lengths of the light being shown by their colors — comparison s., a spectrum formed in the field of vision of a spectroscopist either directly above or below the principal spectrum for the purpose of comparison — continuous s., a spectrum in which the different colors fade into each other by insensible gradations, no lines or bands, whether dark or bright, being present — diffraction s., a spectrum produced by diffraction, especially by the reflection of light from or its passage through a diffraction grating — electric s. 1. That part of the spectrum of which the rays are electrical in character. 2. A spectrum produced by an electric arc, an electric discharge through rarefied gas, etc — emis-

axis and a radial cut from center to periphery. The white disk must be of the purest white card-board, the others should be cut from light card-board or heavy drawing-paper, and painted each with its proper color. For the black disk use a mixture of the best lampblack in a solution of shellac in alcohol, applying it with a bristle brush like an oil-paint. Experiment will show the proper proportions to leave the surface even, firm, and dull. The remaining two disks are to be painted respectively with the best English vermilion, madder orange, light chrome yellow, emerald-green, and artificial ultramarine blue. The pigments should be mixed with a thick solution of gum arabic in water, to the consistency of oil-paint, and applied with a bristle brush. The color must be even and the paper completely covered.  
To prepare any color from the equivalents given in the table, put the required disks upon the axis of any rotation-machinette, as a color-wheel, color-drum, or color-mixer, with the edges of the disks so interposed that a sector of each disk is visible, then, by means of a card-board circle divided on its edge into hundredths, arrange the relative proportions of the standard colors according to the formula given in the table. When the wheel or top is set in rapid rotation, the required color will result from the blending of the components.  
In a few cases the colors are too brilliant to be matched with the disks under these circumstances the brilliancy is reduced by blending with the color a certain percentage of black or white, as given in the first column, this modified hue is then matched by the formula given in the remaining columns, for example, 83 red and 17 blue will match rose lake blended with 30 parts of black. Colors shown in the colored plate now designated in the table on the opposite page by an asterisk, and often differ slightly from the most generally accepted hues of the same names, which are also given in most cases.

spect'u-la'tive, 1 spek'yū-lē-tiv, 2 spē'yū-lā'tiv, a spect'u-la'tiv, 1. Given to speculation (1) Inclined to invest in business operations involving some risk disposed toward speculation as distinguished from investment, as a *speculative merchant*. See **SPECULATOR**, 1 (1) (2) Speculating as a theorist now often opprobriously. See **SPECULATION**, 2 2. Strictly theoretical or purely scientific, aiming at or pursued for knowledge only, and not immediately concerned with practice opposed to practical and experimental, as, *speculative science* 3 Using the discursive method of intellect, employing or resulting from inference, as opposed to intuition and experience now often implying improper methods or insufficient data, as, *a speculative conclusion*  
The truths which are most essential for us to know cannot be discerned by speculative arguments.  
FRANCIS JOHN BUNYAN p 177 in 1880  
4. Of or pertaining to a speculation in land, stocks, etc., hazardous, risky, as, *a speculative venture* 5f. Affording a good view 6f. Frying, observing [ < L *speculatus*, < *specularis*, see **SPECULATE ] — **Speculatrix**, n Speculatrix — **speculative geometry**, pure geometry as opposed to its applications in surveying, mensuration, etc — s. philosophy, the form of philosophy that aims only at theory and does not concern itself with rules for practice — s. reason. 1. 1 A prismatic spectrum showing 400 of the principal Fraunhofer's lines according to Van der Walle from the line A to the line H<sub>1</sub>. See note under LINE, n, 23 (2). The length is about the same as the colored prismatic spectrum shown in the plate, the dispersion is different, owing to differences in the prisms as will be seen by comparing the positions of the lines. The space from n to n in this figure is represented on an enlarged scale in fig 2. 2 A section of the solar spectrum showing most of the dark (Fraunhofer's) lines between the wave-lengths 0.510 and 0.530 micron. The lines from 0.5102 to 0.5188 constitute what is known as the 'little b' group shown in the whole spectrum at b. The section shown above is 0.01 in (1 cm) in the plates of the whole spectra. spect'u-lar, a spectrum regarded as characterizing the body that emits the rays rather than one through which they pass opposed to *absorption spectrum* — flame s., a spectrum produced by a substance when volatilized in a colorless flame — fluted s., a spectrum in which the intensity of the light is as graduated that it appears as if transversely channelled or fluted — gas or gaseous s., a spectrum formed from the rays emitted by an incandescent gas generally consisting of a limited number of bright lines separated by dark spaces — heat s., a spectrum consisting only of heat or infra-red rays especially one formed by non-luminous radiant energy — line s., a spectrum of isolated narrow lines, as of an incandescent vapor — magnetic s., the appearance noted when cathode rays deflected by a magnet, strike a phosphorescent screen — meteor s., the spectrum resulting from the diffused light of a meteor — normal s., a spectrum in which an exact geometric relation between the wave-length of the light and its position in the spectrum may be established, especially, a diffraction spectrum — ocular s. 1. Same as **SPECTRUM**, 2. Same as **CHROMATIC SPECTRUM** — prismatic s., the spectrum produced by the dispersion of light by a prism — pure s., a spectrum in which the overlapping of the monochromatic spectral images of the spectroscopic slit produces no appreciable intermingling of the color-tones. The purity of such a spectrum increases with the diminution in width of the slit — solar s., the spectrum formed from the rays of the sun — an absorption spectrum characterized by thousands of fine dark lines, called Fraunhofer's lines, arranged in a large number of groups. See LINE, n, 23 (2) — spark s., a spectrum given by the incandescent gases and vapors in an electric spark — s. analysis, same as **SPECTROSCOPY** — thermal s., same as **HEAT SPECTRUM** — visible s., same as **CHROMATIC SPECTRUM**

TABLE OF COLORS

In the table of standardized colors, opposite, the columns headed Bk, W, R etc contain the percentages of black, white, red, orange, yellow, green, and blue, respectively, that compose the color given in the first column. Superior figures refer to approximate synonyms and definitions of unusual colors which are given in the note at foot of page. The wave-lengths of the standard colors in microns are as follows: red, 0.644, orange, 0.614, yellow, 0.585, green, 0.521, blue, 0.452. To obtain the desired color, its components must be blended, not by mixing pigments, which will not give the proper result, but in the following manner. Seven standard disks must be prepared, each from 3 to 5 inches in diameter, with a small hole at the center for the

## SOLAR SPECTRUM AND TYPICAL COLORS

48 Type colors with ordinary names for composition see accompanying table. In the prismatic spectrum the dispersion is not proportional to the wave-length. In the grating or normal spectrum the dispersion is proportional to the wave-length. The letters A to H designate the Fraunhofer lines. The numerals I to V locate the five simple colors used in the accompanying table. The third spectrum is arbitrarily divided into 21 parts: red R, orange O, yellow Y, green G, blue B, violet V, and their intermediate colors.

4. A body of officers not having command but attached in an executive or advisory capacity to an army, a corps, a division, or a brigade, as assistants to the officer in command. The central body is known as the general staff, as distinguished from the headquarters staff of an army, a corps, division, brigade, or territorial department, and from garrison staff. Prior to the 19th century the general staff was simply a list of general officers; the modern practice was inaugurated by Scharnhorst in 1808, and has been adopted with various modifications by all modern armies. The general staff is a body of officers forming the central bureau of the military forces of a nation. It may be considered to act as the personal staff of the commander-in-chief or of the ruler of the nation. In European countries the general staff is under a chief of general staff, who is the commander-in-chief's responsible adviser on all matters affecting military operations, through whom he exercises his functions of command and by whom all of the various orders issued by him are signed. Under him the officers of the different departments attend to their appropriate duties and functions; thus the adjutant-generals attend to the organization and discipline of the troops, to the records, and to the application of martial and international law, the quartermaster-generals to the distribution of camps supplies, remounts and questions of transport, the chief medical officers to the hospitals, medical supplies care of the sick, and sanitation of camps and garrisons; the chief commissaries to the purchase and distribution of food-supplies; the chief ordnance-officers to the manufacture and supply of artillery, arms, ammunition, and equipments for the troops and this chief signal officer to the construction, repair, and operation of all military cable, telegraph, and telephone lines and stations, the military balloons and aeroplanes wireless installations and all other duties pertaining to military signaling. The headquarters of an army in the field comprises a personal staff of two or more aides-de-camp, a general staff of 10 officers under a chief and an adjutant-general with his assistants. The chief of the headquarters may also have assistants. The number and composition of a garrison's staff depends upon the size of the garrison and its staff-officers are of lower rank than those detailed with the larger units. In the United States the territorial divisions and departments are commanded by a major-general and a brigadier-general respectively each assisted by his appropriate staff, the act of Congress, Feb. 14, 1903 created a General S Corps. The chief of staff under the direction of the President or Secretary of War, has supervision over all branches of the military service line and staff except such as are exempted therefrom by law or regulations. This corps comprises 4 general officers, including the chief of artillery 4 colonels 6 lieutenant-colonels 12 majors and 20 captains all except the chief of artillery being detailed from the army at large. In time of war the military forces are divided into armies, corps, divisions, and brigades, each provided with a competent administrative staff. In England in time of peace each commander-in-chief of a territorial region containing an important group of garrisons has a brigadier-general as chief of the general staff and a major-general as his assistant in charge of administrative matters

A Naval staff was organized and embodied with the Board of the British Admiralty, May 14, 1917. It has charge and direction of the Division of Operations, is concerned with the naval policy, war operations, not-submarine work, and the projection of trade.

A bulky staff implies a division of responsibility, slowness of action, and indecision whereas a small staff implies activity and concentration W T SHERRMAN Memoirs vol. 11 p 402 (1836)

6. Mus The combined lines and spaces used to represent the pitches of tones

The staff has always five long horizontal lines and the accompanying long spaces, but is colored as the occasion may require by short lines above or below and the short spaces they bring, called added lines and spaces, or added degrees. The added lines are called also ledger lines. The lines of the staff are numbered beginning with the lowest, and the spaces likewise, beginning commonly with the two just above the first line, the some writers include in the permanent spaces of this staff that below the first line and that above the fifth and hold that they should be numbered accordingly. The lines and spaces collectively are called degrees. Each of the degrees of the staff represents a pitch, which varies according to the clef placed at the beginning. See CLEF. The tones represented by the different positions of notes on, above, or below the staff, with the clefs commonly in use, are shown in the illustration Gregorian music has a staff of four lines with the C clef

**stand'point', n.** 1. stand'point', 2. stand'point', n. A position from which things are viewed or regarded, and in relation to which they are compared and estimated, a point of view, basal principle, as, the *standpoint* of conservatism, all depends upon one's *standpoint*.

The word *standpoint* is sometimes inconsiderately censured as being a superfluous substitute for *point of view*. That *standpoint* and *point of view* are not always interchangeable will be evident when the fact is recalled that, in literary usage, *point of view* has two different senses. (1) The point from which one views. (2) The point or relative place at which something is viewed, giving rise to the two phrases.

From this *point of view* and "in this *point of view*". Furthermore, there is *standpoint*, as commonly employed, an implication of some permanent position as regards the view taken or the opinion held. It is especially applicable to principle, convictions, etc., as determining views. No such implication of permanence attaches to *point of view*. Lincoln and Douglas argued, in their celebrated debate, from different *standpoints* at times each for the purposes of argument, took the other's *point of view*. *Standpoint*, therefore, besides being convenient as a single word, conveys a suggestion not carried by *point of view*, and, tho it is less regular in formation than *standing-point*, its irregularity is not wholly anomalous. [Representing *G* *standpoint*.]

**stan'za**, 1 stān'za, 2 stān'za, n [Poet] 1. A certain number of lines of verse grouped in a definite scheme of meter and sequence, and usually corresponding to the other line-groups in the same poem, a metrical division composed of lines, as the line is composed of feet often incorrectly called a verse 2. A specific form of stanza (1) classic, as the Alcaic, or the Sapphic, stanza, or (2) English, as the Spenserian, or the Chatterton, stanza See STROPHES, SYSTEM

In English verse the structural factor of the stanza is generally the rime, which binds the lines together Two rimed lines form a couplet, three a triplet A four-lined stanza is often called a quatrain a six-lined stanza, a sestet, an eight-lined stanza, an octave Favorite stanzaic forms in English are the four-stress quatrain with alternate rimes, the rime royal in seven decasyllabic lines (a b b b o o), the Spenserian in eight decasyllabic lines and an Alexandrine (a b a b b o o o), the ottava rima of Don Juan (a b a b a b c c), and the ode-stanza of Gray, Wordsworth, etc The letters in the parentheses show the arrangement of rimes Compare STROPHES See BALLADS, ROMANCES, SONNET, SONNET, TERZA-RIMA, TRIOLET, VILLANELLE

The prevailing method of combining verses is by end-rime and here we distinguish between stanzas where the verses are homogeneous and stanzas made up of verses with a varying number of accents F B GUMMERS Poetics p 235 [o & co 1891]

The alexandrine was I believe first used by Sannazaro for the sake of closing his stanza with a fuller sound S JOHNSON Lives of the Poets, Dryden in vol 1 p 306 [s & e 1810]

**star**, n. *Astron* 1. A luminous celestial body so distant as to appear like a luminous point in common usage including the planets, but in astronomy limited to the fixed stars, and hence sometimes applied by analogy to the sun.

The number of fixed stars distinguishable to the naked eye is from four to six thousand and the largest telescopes reveal probably between 30 and 50 millions. The brightness of stars is expressed by a scale of magnitudes in which the 16 brightest are called of magnitude 1, and the faintest visible to the naked eye of magnitude 6. Several hundred of the brighter stars are designated by the name of the constellation to which they belong preceded by a Greek or Roman letter or number. Of these many also have special names of their own generally assigned by the Arabian astronomers, as shown in the table below. Classified by their spectra stars fall under several types. See **STAR-TYPE**, below. Compare **ASTRONOMICAL OBSERVATION**, **PLANET**.

With the development of observational astronomy the universal universe was arbitrarily divided into areas characterized by special assemblages of stars these assemblages were named asterisms or constellations and each received a name suggested by mythological or other figures. The heavenly bodies fall into

two classes (1) the fixed stars or stars proper which retain the same relative position with respect to one another and (2) the planets which have motions of a distinctly individual character, and appear to wander among the stars proper.

 56, wheat, 54.75 barley, 46.3 rye, 45, beans, 37.7, oats,  
 36.5, and potatoes, 18.5 The action on starch of certain  
 enzymes, as ptyalin of the saliva and amyllopsin of the pan-  
 creatic juice, is of great value in digestion, yielding maltose  
 and dextrin In brewing starch is converted into maltose  
 by the diastase of the barley-grain The thousands of tons of  
 starch are annually converted into glucose, and also into  
 dextrin or British gum, by treating it with heat and mineral  
 acids When heated in water starch swells up and forms an  
 opalescent paste composed of a soluble part (granulose) and  
 an insoluble part (starch-cellulose) When a water solution  
 of starch is treated with alcohol a white powder called soluble  
 starch is precipitated The names of different kinds

Mind, indeed, a state of mind, a condition of various states, but a change of state is not destruction, in one more than in the other.

Brown *Philos Hum Mind* lect xxvii p 650 [1866 1853] 2. A political community organized under a distinct government recognized and conformed to by the people as supreme, a commonwealth, a nation.

Essential to a state is some sort of association, organization or civil government recognized as valid by its members who live in a common region or locality. Growing out of the family, it has a natural basis in man's social nature and relations, and in time develops a form decided by men connected with it, and a legal basis and standard of ultimate appeal in essential right and justice. Its chief aim is to widen man's sphere of social effort and activity and to insure freedom and security in that sphere.

The American Union constitutes the real American State. Our commonwealths have only a limited sovereignty, and are imperfect States in the real sense of the word State; they are only parts of a great State.

B. T. *Ex Intro to Polit Econ* pt 1 p 30 note [1847 1839] 3. Specif., such a community forming part of a federal republic, especially [S.] one of the United States, or [S.] of the republic modeled after it.

In the United States of America the States embrace (1) the thirteen colonies that declared their independence in 1776 and framed the present Constitution in 1789, and (2) communities admitted to the Union thereafter under the provisions of the Constitution. Most of the latter had previously been governed as Territories. At present the United States is divided into 48 States and the District of Columbia. The status of the extracolonial portions of the United States has not been officially determined. In the *Constitutional Directory* Alaska and Hawaii are recognized as represented by Territorial delegates while the Philippine Islands and Porto Rico are shown to have resident commissioners. (See *TERRITORY*). In most of the republics modeled after the United States, as in South America, the states are somewhat arbitrary divisions of the country made after the independence of the whole country had been achieved. A State of the United States has its own legislative executive (called *Governor*), and courts and manages its own affairs with the exception of such as are delegated to the federal government as foreign relations, interstate commerce, the currency, etc. Compare *CANTON*, *COMMONWEALTH*, *FEDERAL PROVINCE*.

**steam**, 1 stīm, 2 stīm, r I. f 1. To treat with steam, saturate, cook, or otherwise affect by the application of steam, as, to steam timber to bend, to steam a pudding 2 To dry out the moisture from (unhewn bricks) by firing the kiln slowly 3 [Rare] To evaporate

II. v 1. To make, generate, or furnish steam as a boiler, give off or send out steam, as a hot liquid 2. To move by steam, as a vessel, as, she steamed down the bay 3. To rise in the form of steam, he or move as or like steam, as, vapors steam upward from the earth 4†. To flare, blaze, flash [*AS stēman*, < *stēam*, vapor]

**steam**, n 1 Water in the form of vapor, aqueous vapor, especially, the gas into which water is changed by boiling transparent until it begins to condense

Water changes into aqueous vapor by surface evaporation at all temperatures, but the vapor is not commonly called steam till it is produced in the body of the liquid by ebullition The temperature at which this takes place increases with the pressure at ordinary atmospheric pressure it is 100° C or 212° F The temperature is influenced by impurities in the water and by the substance of the containing vessel When ebullition begins the water remains at the same temperature, all the heat applied being employed in doing molecular work in churning water into steam This fact is expressed in ordinary language by saying that the heat becomes latent in the steam On condensation the heat reappears Till the moment when all the water is turned into steam, the latter is said to be saturated If heated still more, its temperature rises and the steam is said to be superheated (See **PHASES** below) Steam is the most economical agent known for use in engines, on account of its great latent heat, coefficient of expansion and facility of condensation (See **ENGINE STEAM-ENGINE**) It is used largely for heating, chiefly for warming buildings but also for cooking, and in various manufactures as in brewing

Steam is used as the first element of many compound words which are self-explaining in the act of operation by steam superheater, steam-trunk, a steam-pipe, a steam-dredger, a steam-axe, a hoist, a launch, a sparkler, a turbine, a stur, a stessel, a wagon, a winch, a whistle, a yacht

2. The visible mist or cloudlike mass of fine particles of condensed water into which aqueous vapor is condensed by cooling 3. Any vaporous exhalation, ns, the steam from a horse's body 4. [Collog.] Energy; force, as, to put on steam [*AS stēdm*, vapor] **Syn.** See **CLOUD**

tend like a string, form into an extended line or series often with out, as, stones *strung* beside a walk, he *strung* out his sermon. 8. [Slang, U S] To jolly, hoax. **II.** 1. To stretch out into a long, irregular line, as people. 2. To form itself into strings, present a stringy appearance, as, the paint is stiff and *stringy*. 3. *Billiards* To drive the cue-ball from within the string against the farther cushion and back, the player whose ball stops nearest the cushion at the head of the table having the choice of order in playing. 4. To fly unevenly in an elliptical or elongated mass, as a charge of shot from a gun. 5. [Slang] To practise imposition; humbug — to *string* a bet, in faro, to spread out the chips instead of stacking them, to indicate that the bet is on odd or even cards only or that it takes in a remote card — to *string* up, in wire-drawing, to pull rods of wire through the plate-holes of a drawbench.

**string, n** 1. A slender line thinner than a cord and thicker than a thread, twice, also, a slender strip, as of leather. (1) The cord of a bow. (2) A leather or other strip for holding book-covers together. (3) Prepared wire or catgut, plain or covered, for musical instruments. When weighted to resist the drawing power or tension, the rapidity of its transverse vibrations depends upon the tension, the length, and the specific gravity of the material, and in exact ratio with this rapidity the ear is sensible of the difference of musical pitch. From the 6th century B C the monochord or single *string* stretched over a sound-board and measured by movable bridges, has been the canon of musical intervals, the relative scale pitch. *Gauche Dict of Music* vol. IV, p. 727.

For the various strings of stringed instruments with the pitch to which they are properly tuned, etc. see BANJO, GUITAR, VIOLIN, etc. See also INSTRUMENT.

2. A string-like organ or formation.

All down the loose-walled lanes in arches' flowers  
The barberry droops its strings o' golden flowers.

LOWELL, *Biglow Papers* second series vi st 6.  
(1) A fibrous vegetable formation as the strings which unite the twosides of a bean-pod. (2) An animal nerve or tendon. (3) *Mining* A small vein or irregular thin lode. 3. A thin cord upon which anything is strung, a row or series of things connected by a small cord, as, a *string* of pearls. 4. Hence, a connected series or succession, as of things, acts, or events sometimes implying unusual length, as, a *string* of carriages, a *string* of lies.

To these demands and complaints the estates replied by a *string* of resolutions.

MOTLEY, *Dutch Republic* vol. in pt v, p. 246 in 1862.

5. [Colloq.] A drove or small collection of stock, especially of saddle-horses. 6. *pl* Stringed instruments. 7. *Billiards* (1) The score. (2) The buttons, strung on a wire, by which the score is kept. (3) The string-line. (4) The act of stringing. See *string*, v, 3, 8.

Arch. A string-course, as of bricks. 2. Shipbuilding The highest course of planks in a vessel's ceiling. 1. *Carp* A stout inclined plank, notched and set edgewise as a support for the steps of a wooden stairway. Compare *string-piece*. 11. *Print* A strip of duplicate proofs of a compositor's work, as for a week, pasted together end to end, for convenient measurement, a similar arrangement of proofs of contributed matter kept in newspaper offices. 12. In woolen-manufacturing, a length of ten feet. 13. [Colloq., Eng.] A set of syllogisms conveniently arranged for use, to be employed at a college disputation. 14. The fibrous albumen of an egg. 15. [Slang] A hoax. [*AS* *strenge*, perhaps < *strang* < *strong*] — close string (*Carp*), a string-piece not notched for the steps of a staircase. closed s. — face's string, *n* Arch. The exterior string of a staircase the string which carries the stair-ends farthest from the wall. In wooden stairs it is often a false string or decorative facing applied to the rough outer string which actually supports the stairs — open s. — 1. *Mus* See *open*, s. (1). 2. *Carp* A notched string in a staircase — rough s. — (*Carp*) a notched board fitted to the inside of an open string to strengthen it — string'val'pha-het, *n* An alphabet for the use of the blind, in which the letters are represented by knots diversified by form or arrangement, tied in a string or cord. All the knots are easily made, and a message can thus be tied into a string and sent as a letter — s. bean, *n* Any tender bean in its pod used for food so called because

the fibrous thread along the back is usually removed before cooking — s. block, *n* A wooden block in a pianoforte, from which project the studs to which the fixed ends of the strings are looped — s. board, *n* A board serving as a string-piece — s. course, *n* A horizontal molding or ornamental course usually projecting along the face of a building, especially under a row of windows, or immediately below a parapet or tower — s. galvanometer, *n* *Elec* A galvanometer so sensitive that the least fluctuation of current is noted in effect upon a string-like fiber the changes in which are registered by microscopic observation or photography — s. halt, *n* *Vet* Spring-halt a corrupt form — s. line, *n* *Billiards* A line drawn across the table through the light-red spot used in stringing for lead. See *string*, v, 3 — s. organ, *n* A reed-organ having rods from its reeds that set vibrating corresponding wires or strings stretched over a sounding-board and tuned in unison with the reeds — s. pea, *n* A variety of pea with edible pods, prepared and eaten in the same manner as string-beans. **Syn.** objective. *Subjective* and *objective* are synonyms in  
but one point of view, being, for the most part strictly  
antonyms. *Objective*, relating to the object of mental  
states, that is, to something outside the perceiving mind,  
in brief phrase it may be said that *subjective* relates to some-  
thing within the mind, *objective* to something without.  
mountain, as a mass of a certain size colour, etc., etc., is  
an *objective* fact. The impression our mind receives, the men-  
tal picture it forms of the mountain, is *subjective*. But this  
*subjective* impression may become itself the object of thought  
(called "subject-object"), as when we compare our mental  
picture of the mountain with our idea of a plain or river. The  
direct experiences of the soul, as joy, grief, hope, fear, are  
purely *subjective*; the outward causes of these experiences,  
as landscapes, persons, events, disappointment, are *objec-*  
tively real. Different individuals may receive different im-  
pressions from the same *objective* fact, that which to one  
is a cause of hope being to another a cause of fear, etc. The  
style of a writer is called *objective* when it derives its materials  
mainly from or reaches out toward external objects, it is  
called *subjective* when it derives its materials mainly from or  
constantly tends to revert to the personal experience of the  
author. See INHERENT — subjective color, same as ac-  
cidental color — 4. cost, the discomfort or dissatisfaction  
experienced in the effort to attain a desired end — 5.  
matters of *subjective* interest, the method of investigation that observes

Diagram of Apparatus used in the Manufacture of Sugar from Sugar-cane.

The cane-carrier (1) delivers the sugar-cane to the cane-mill (2), the bagasse being taken away by the carrier (3) while the juice flows to the straining-tank (4). Thence it is pumped up to the raw-juice tank (5) from which the defecators (as 6) are supplied. The clear liquid after defecation is discharged into the filtering-tank (7), and the scum and other refuse is carried away by the canal (8). From the filtering-tank the juice is pumped into the first pan (9) of the three pans constituting the triple effect and part of the water is evaporated. Thence it is led to the second pan (10) and thence to the third pan (11). In each successive pan a portion of the water is evaporated. 9 is heated by steam from the drum (12) and the vapor arising from the juice is led to 10 and supplies the heat for further evaporation. In like manner the vapor from 10 is utilized in 11. The latter is connected with the condenser (13) where the best possible vacuum is maintained. 14 is the hot-well 15 vapor-pipe 16 injection-pipe 17 air-pipe. A large percentage of the water in the juice is evaporated in the triple effect leaving the sirup as it is then called at 18 in a much-concentrated condition. The sirup is then clarified at 19 by boiling and skimming and passes to the tank (20) the refuse going off in the canal (21). This clarified sirup then passes to the vacuum-pan (22) where the final evaporation takes place. When evaporated to the point of crystallization the valve (23) is opened and the sugar is discharged into the mixer (24) where it is stirred by revolving paddles. From the mixer small quantities are taken into the centrifugal baskets (25) say 200 or 300 pounds to each basket for each charge. The baskets are then rotated rapidly the molasses being thereby drained quickly from the sugar leaving clear crystals of sugar almost white in color, and ready for the refiner.

sug-ges't'-i-ble, 1 su-jest'-i-ble, 2 sū-gēs't'-i-ble, a 1. That can be suggested, as, a suggestible motive 2. Possessing suggestibility, easily led, yielding, as, a suggestible patient sug-ges't'-i-ble, a

sug-ges't'-i-ble, 1 su-jest'-i-ble, 2 sū-gēs't'-i-ble, n. [Rare] To let upon or affect by suggestion

Secret information, accusation, charge [F. & L. suggestio(n)-, < suggestus, pp of suggero, suggest, < sub, under, + pero, bang] sug-ges't'-ment', n. [Rare] Hint, insinuation, suggestion, intimation A suggestion brings something before the mind less directly than by formal or explicit statement as by a partial statement, an incidental allusion an illustration, a question or the like Suggestion is often used of an unobtrusive statement

of one's views or wishes to another, leaving consideration and any consequent action entirely to that person's judgment and is hence, in many cases, the most respectful way in which to convey one's views to a superior or a stranger. A suggestion may be given unobtrusively, and even unconsciously, as when we say an author has a suggestive style. An intimation is a suggestion in brief utterance, or sometimes by significant act, gesture or token of one's meaning or wishes, in the latter case it is often the net of a superior. As God in his providence gives us intimations of his will. A hint is still more limited in expression, and is always covert, but frequently with good intent, as to give one a hint of danger or of opportunity Intimation and intimation are used in the bad sense an intimation is a covert or partly veiled injurious utterance sometimes to the very person attacked, an intimation is commonly secret as well as sly, as if pointing one out for opprobrium

—collective suggestion (Psychol.), a suggestion which affects simultaneously a number of minds by whom it is received—negative s., hypnotic suggestion with a view to diminishing or suppressing sensation, perception, self-control, or other positive powers of the subject In certain cases it may be carried to the extreme of making it impossible for the hypnotized person to see plainly visible objects, etc.—principle of s., the capacity of feeling relations, as resemblances, differences or proportion when two objects or ideas are perceived a term used formerly by associationists, especially by Dr. Thomas Brown virtually equivalent to psychological judgment—simple s., association of ideas, as distinguished from relative suggestion—spontaneous s.

Derived from sulfuric acid and spirit of wine (alcohol) — sulfonolonic acid, same as *ETHYL SULFURIC ACID* — *sul'fo-wolf-ramic*, *n*. A sulfonate — *sul'fo-wolf-ramic*, *n*. Any one of certain compounds occurring between sulfides and sulfones in which the group SO is in union with hydrocarbon radicals as, ethyl sulfonate (C<sub>2</sub>H<sub>5</sub>SO<sub>2</sub>C<sub>2</sub>H<sub>5</sub>) — *sul'fa-ax'ism*, *n*. Chromic poisoning from sulfuric acid

**sul'fur**, *n*. 1 *sul'far*, 2 *sul'fur*, *ct*. To fume with burning *sul'phur*, *sul'fur* or with sulfuric acid, as a wine-cask before filling (to prevent acetous fermentation), or plants (to cure or prevent mildew), or a hive (to kill the bees of a colony, or to destroy worms in the honey-comb)

**sul'fur**, *n*. *Chem*. 1. A pale-yellow non-metallic *sul'phur*, crystalline element found largely native, and then crystallizing in the orthorhombic system

Sulfur exists in several allotropic forms, of which the more important are the two crystalline modifications one orthorhombic and the other monoclinic, both of which are soluble in carbon disulfide, and an amorphous modification that is insoluble in carbon disulfide. When viscid sulfur is poured into cold water it assumes a temporary elastic or plastic condition. Sulfur in its chemical relations is the representative of oxygen, to which it is equivalent, atom to atom. The two elements, though very dissimilar in their ordinary physical characters, correspond very closely in the nature of the compounds which they form, and in the properties they exhibit when both are in the gaseous state. Sulfur burns with a blue flame, producing sulfur dioxide. It is used in the arts in making gunpowder, matches, vulcanized rubber, and sulfuric acid, and also in medicine, especially in skin-diseases. Play says that when sulfur is burned in darkness it gives the faces of the attendants the pallor of death, hence it was used in certain religious ceremonies, and called *thion* (heaven, *thion* acids). In alchemy it was regarded as an elementary principle, the others being salt and mercury. See *def* 4.

The great repositories of sulfur are either beds of gypsum and the associated rocks, or the remains of active and extinct volcanoes. In the valley of Ntn and Mazzara, in Sicily. [and] Cracow, in Poland, it occurs in the former situation. Sicily and the neighboring volcanic islands the Solfatara near Naples the volcanoes of the Pacific Ocean, etc. Kilauea, Hawaii, etc. are localities of the latter kind. *DANA Mineralogy* p. 9 [iv. s. '03]

Near Lake Charles at Sulphur (Louisiana), are very extraordinary sulfur deposits. The beds lie several hundred feet underground and are of disputed origin. The sulfur is dissolved by superheated water forced down pipes and the water with sulfur in solution is forced upward by hot air pressure through other pipes. The sulfur comes 99 per cent pure, the surface of the ground where it is cooled in immense bins and then broken up and loaded directly upon cars for shipment. *Encyc Brit* 11th ed. vol. xvi. p. 54

2. Any one of various yellowish pteridaceous butterflies, as, the common North-American clouded sulfur (*Colias philodice*), the cloudless sulfur (*Calidryas eubule*). 3. *Art*. (1) A cast in relief of an engraved plate taken in melted sulfur. (2) An impression from such a cast. Engravings on plate, paxes, and the like were thus reproduced in the 16th century. 4. In medieval theosophy, one of the three principles representing, in the Godhead, the Son, in nature, cause, and in man, motive power. 5. *Mining*. (1) Iron pyrites. (2) Sulfureted hydrogen, sometimes carburated hydrogen. [*L. sul'fur*, the usual spelling, also *sulphur*, as in *Gr*]

— amorphous sulfur, a variety of sulfur devoid of crystalline form, that is insoluble in carbon disulfide and is obtained by boiling sulfur with milk of lime — flowers of s, a light-yellow pulverulent modification of sulfur formed when the vapor of sulfur is condensed — peroxide of s, a colorless viscous liquid (S<sub>2</sub>O<sub>2</sub>) obtained by the silent electric discharge through a dry mixture of oxygen and sulfur dioxide — roll s., sulfur that has been purified and cast into rolls or sticks, a commercial name — ruby s. (*Mineral*), same as *REALGAR* — soft s., a plastic variety of amorphous sulfur formed when viscid melted sulfur is poured into water — stick s., same as *roll sulfur* — sublimed s., same as *flowers of sulfur* — sulfuric acid, an acid in which sulfur replaces oxygen, as sulfuric carbonic acid (H<sub>2</sub>CS<sub>2</sub>) as contrasted with carbonic acid (H<sub>2</sub>CO<sub>3</sub>) — s. alcohol, same as *MERCAPTAN* — s. auratum, a yellowish-red antimonial sulfide used in medicine — *sul'fur-bac-ter'i-um*, *n*. *Bot*. One of the bacteria of several genera, especially the genus *Beggiatoa* produced in water when sulfureted hydrogen is generated by the decay of organic matter. Those of *B. alba* appear as a white or silmy covering on the mud containing the organic remains. Other species as those of *B. roseopectinata*, of *Spirillum sonchifera*, and of *Bacterium sulfuratum*, are known as *Bacterium sulfur-haerula*, *n*. *halsam*, balsam of sulfur. See *BALSAM* — s. base, a sulfide of the alkaline metals that acts as a base — s. burner, *n*. A blast-furnace in which sulfur is burned, as in the manufacture of sulfuric acid — s. carrier, *n*. A compound such as lead thiosulfate or antimony pentasulfide used to expedite the union of sulfur with India-rubber during the process of vulcanization — s. chloride, any of several combinations of sulfur and chlorine as, sulfur monochloride or s. subchloride (an unstable liquid, S<sub>2</sub>Cl<sub>2</sub>, used in the vulcanization of rubber), and s. dichloride (a fuming, unstable liquid, SCl<sub>2</sub>) — s. dioxide, a colorless gaseous compound (SO<sub>2</sub>) that has the peculiar irritating odor of burning sulfur, and is formed when sulfur is burned in air. It is now sold in liquid form — s. dye, any of a group of dyes obtained by fusing certain organic compounds with sulfur and alkali sulfide used extensively for vegetable fiber cloths — s. ether, thio-ether. Compare *ETHER* 1 — s. group, the elements sulfur, selenium, tellurium, and oxygen formerly classed together owing to their having many properties in common — s. iodide, a grayish solid (Si<sub>2</sub>) sometimes used externally for chronic skin-lesions — s. ointment, a mixture of sulfur and benzoinated lard used as an ointment — s. ope, *n*. *Mineral*. Same as *pyrite* — s. ray, *n*. Same as *POLYMER* — s. shower, *n*. s. salt, a salt of sulfur acid — s. trioxide, a white opaque crystalline compound (SO<sub>3</sub>) formed by combining sulfur-dioxide and oxygen gases in a heated tube containing metallic oxides. It unites with water and forms sulfuric acid — s. vitrum, an impure sulfur, gray in color, obtained from the dregs of castings — s. waters, *n*. *pl*. Natural-spring waters charged with hydrogen sulfide — s. whale, *n*. This is sulfurbottom — s. yellow, *n*. A pale yellow vegetable — s. yellow, *n*. Same as *LYCOPUR*, 3

2. To shine like the sun

**sun**, *n* 1. The heavenly body that is most conspicuous from the earth, being the center of attraction and the main source of light and heat in the solar system; regarded by astronomers as a star

The sun's mean distance from the earth is nearly 92,830,000 miles and its diameter 864,000 miles. The surface is 12,000 and the volume 1,300,000 times that of the earth, but the mass is only 332,000 times as great, so that the density is only about one-quarter that of the earth. The period of rotation is 25.3 days at the equator, 25.8 days at latitude 20°, 27.0 days at latitude 40°, as determined by the movement of sun-spots the recent determinations show that there is a peculiar surface-drift in the sun-spot belts. The sun's surface, the *photosphere*, has a gray background thickly covered with granular or cloud-like forms called *nodules* or *rice-grains*. It is indented at certain latitudes within the belt included between the 40th parallels of north and south latitude by irregular spots (see *SUN-SPOT*) Above this layer comes the *chromosphere*, in the midst of which is the *reversing layer* where the Fraunhofer lines are supposed to originate. Explosive projections of the lower material into fantastic shapes cause the *prominences*, distinguished as *quietest* or *active* according to their character. The *corona* (see *RADIA*) are found in all parts of the sun, especially around the spots and seem to be highly attenuated condensations like clouds. Beyond all these, extending to great visible distances, is the *corona*, observed only during total eclipses (see *CORONA*) The material of the sun, as revealed by the spectrum, has many of the chemical elements known on the earth, and others not known to have counterparts here. It is generally believed that the sun has an influence on terrestrial magnetism, and facts have been adduced to show that the polar magnetic field of the sun, following the stream-lines visible in the corona, reaches the earth and there affects the earth's magnetism

2. Any star that is the center of a system revolving around it, as Sirius, also, either of the components of a double star 3. The light and heat radiated from the sun, sunshine, as, let us sit for a while in the sun. 4. Figuratively, anything brilliant and magnificent, or that is a source of splendor, a glorious or resplendent object, as, Christ is the sun of righteousness (*Mal* iv 2).

5. [Poet.] The time of the earth's revolution round the sun, a year 6. The daily appearance or daily shining of the sun, a day, also, the time of its appearance or shining, sunrise, as, twenty suns ago, wait not for tomorrow's sun 7. Her The sun's disk, sometimes represented as a human face enwrapped by rays alternately straight and wavy usually described as proper, or in its glory or splendor (surrounded by wavy rays), and commonly blazoned or unless otherwise specified. drill with the cutting point shaped into two pyramidal planes — S. guards, mercenaries from Switzerland used as a special body-guard by former sovereigns of France and Naples, and by other monarchs still employed at the Vatican — S. languages, the languages spoken in Switzerland. In fifteen cantons the prevalent tongue is a difficult Alemannic dialect called *Swiss-German*, or *Swiss*. In five it is a French dialect, in one, Italian, and in Graubünden half the people use the Ladin. See *LADIN*. S. League, a defensive league begun by the men of Uri, Schwyz, and Unterwalden in 1291, increased in 1513 to 13 cantons and superseded in 1798 by the Helvetic republic.

**Swiss**, n [SWISS or (Archaic) SWISS'ES, pl] 1. A native or naturalized inhabitant of Switzerland. 2. [Rare] Any of the Swiss languages, especially Swiss-German.

**Swiss/helm**, 1 swiss/helm, 2 swiss/helm, n Jane Grey (*nee* Cannon) (c.1515-7/1584), an American reformer.

**swiss/ing**, 1 swiss/ing, 2 swiss/ing, n The conforming of black cloth by bows after dampening. See *nowl*, 5.

**Switz**, Switz, n Switzerland.

**switch**, 1 switch, 2 switch, n 1. To whip or lash. 2. To put in motion with a switch, strike with something slender and flexible, as, I *switched* the lad, the cow *switched* me with her tail. 2. To put in motion with a quick jerk, cause to move suddenly; as, she *switched* her skirts away, the mare *switched* her tail over the dashboard. 3. To shift from one track to another, as a car or tram, shunt, figuratively, to change or shift, as a course of conduct.

In the night, we are *switched* off from all self-care and our very mind runs in grooves not laid by us.

**BSWELL Moral Uses of Dark Times** p. 27 [s. 1868] 4. *Elec*. To shift from one circuit to another, or in or out of circuit, as an electric current, shunt. 5. [Prov Eng] To trim, as a hedge.

**II**, 1. To make a lashing motion, give a careless blow with something slender and flexible, as, he *switched* with his cane at the thistles. 2. To change track or circuit, as, the train *switches* off at Wilmington, the curve *switches* into two parts. 3. [Prov or Obs] To walk with a jerk or unequal tread, also, to walk mimbly.

**switch**, n 1. A small flexible twig or rod, especially when used for chastising. 2. A tress of human or false hair, fastened at one end, used by women in hair-dressing. 3. A mechanism for shifting a moving body in another direction or performing some analogous operation; as, a *switch* in a slot-machine. Specif. (1) On a railway, a device for moving a small section of track so that rolling-stock may be run or shunted from one line of track to another. Railway switches are named (a) from their construction, as *slip-switch* (one consisting of a set of switch-points in each of two intersecting tracks and a connecting curve, by means of which cars can be changed from one track to the other in the double slip-switch, two additional sets of points are required and changes can be effected in either direction), *split* or *point* (one in which a rail from each track, usually the two inner or switch-rails is tapered back for several feet from the free end so as to lie closely against the side of the continuous or stock-rail when the free ends point in the same direction as the train moves. It is a trailing point switch opposed to facing point-switch in which the ends face in the opposite direction to that of the train's motion), *stub* (a switch in which the ends of rails forming a part of the main line can be moved sideways so as to align either with the continuation of the main line or a branch line), (b) from their operation or the purpose they serve as derailing (one used on loag grades to throw a runaway car or train from the track in order to prevent a collision), *jumping* (an automatic switch used on tram-tracks in mines). (2) A switchboard. (3) A thumb-piece for turning on gas or an incandescent light. (4) *Elec*. A device, as a movable plug or a bar of metal moving on a pivot to make or break a circuit, or transfer a current from one conductor to another.

Electric switches are sometimes named (1) from their operation, or the purpose they serve, as *changing* switch (changing a circuit from one source to another), *disturbance* switch, (a multiple switchboard, also one for connecting several dynamos with the same circuit), *double-pole* or *double-break* switch, (connecting with both terminals of a circuit) *feeder* (connecting the feeder and the bus-bars of a central station), *limit* switch (a device for opening the circuit when the current exceeds a certain value), *overload* switch, (preventing a storage-battery from too sudden discharge), *pole-changing* switch (a pole-changer), *reversing* switch (changing the direction of a current), *selector* switch (an automatic switch on telephone exchange boards), *the in* switch (a heavy current switch which connects bus-bars), *the switch*, *timers*, (operating at a set time), *two-way* switch, (having two contacts and connected with two distinct circuits) (2) from their mechanism, as, *knife* or *knife-edge* switch, (provided with a blade for connecting or forcing apart), *lever* switch, (fitted with a lever, as in a telegraphic instrument) *locks*, (having a spring to keep the lever in position), *mouse-trap* switch, (an automatic switch shifted by an electromagnet when a current passing around the latter falls below a certain strength), *peg* switch, (same as *plug-switch* see *PLUG*), *removable-key* switch, (a plug-switch), *snaps*, (in lock-switch), *stab* switch, (a switch in which a pointed rod is pushed into metal rings), *tumbler* switch, (a switch consisting of one or more metal arms pivoted in the middle which make contact at their extremities when rocked on the pivot), *two-point*, *three-point*, etc., switch, (completing a circuit through either of 2, 3, etc., contact-points).

4. The act or operation of switching. 5. The end of the tail in certain animals, as a cow. 6. Same as *skittering*. [*< MD swick, < swicken, wag*] Syn: see *stick*.

**switching**, n A switching operation in which a train in motion is divided into two parts by disconnecting at some point, one part going forward on the main line while the other is shunted on to a siding — *switching-har*, n 1. A bar connecting the movable end of a switch with the lever that moves it. A bar used in operating an electric switch so as to make or break a circuit — *s. blade*, n. *Elec*. That portion of the metal in a knife-switch which is inserted between the jaws of the copper-clip — *s. block*, n. The metal piece which receives the plugs of an electric switch — *s. cast*, n. *Angling* Same as *skittering* — *s. cock*, n. *Mach*. A three-way cock — *s. gear*, n. The mechanism that works a switch, especially of a railway-switch — *s. lantern*, n. A lantern placed on a railway-switch lever, to indicate by its position or color the condition of the switch — *s. lever*, n. The lever by which a switch is moved or operated — *s. motion*, n. A mechanism for switching something, in a bobbinet-frame a device for reversing the motion of the shuttle after it has passed across the warp — *s. plate*, n. An iron plate on tram-roads in mines, to change the direction of movement — *s. signal*, n. A visible signal as a lantern or flag to show whether a switch is open or closed often set automatically — *s. sorrel*, n. A shrub (*Dodonaea viscosa*) with sour leaves which have given it this name in Jamaica. It is widely diffused, and furnishes a weak fiber — *s. stand*, n.

A standard bearing the lever and locking device of a railway-switch — *s. stable*, n. A form of switchboard — *s. tender*, n. A switchman pointsman — *s. tower*, n. A building fitted with necessary equipment for operating switches or points. See *switch*, n. 3 — *s. valve*, n. A three-way valve.

**switch/back**, 1 switch/bak, 2 switch/bak, n 1. Originally, and properly, a railway or part of a railway for ascending or descending a steep incline by a series of tracks running in a zigzag to and fro along the slope, the train switching from one to another and running forward and backward alternately. 2. A gravity-railroad in which the cars are hoisted or elevated to a point from which they descend by gravity over a circuitous route to the point of starting, a system used for amusement at summer resorts — *switch/back*, n.

**switch/board**, 1 switch/bord, 2 switch/bord, n A board or table bearing switches for connecting or disconnecting electric circuits, as in the central station of a telephone service, for connecting subscribers.

— *multiple switchboard*, n. A switchboard bearing a number of switches by which any one of a number of separate circuits or loops may be connected with one or more others, as in the telephone service — telegraphic s., n. device by which any one of a number of telegraphic apparatus may be put in or thrown out of circuit with any line connected with the station at which the board is placed.

**switch/el**, 1 switch/el, 2 switch/el, n [U S] A drink made of molasses and water, sometimes with vinegar, ginger, or rum added hence, any strong drink flavored.

The luncheon was packed in a large basket, with bottles of root beer and a jug of switchel.

C D WALKER *Being a Boy* p. 26 [o. & co 1878] **switch'er**, 1 switch'er, 2 switch'er, n 1. [U S] (1) A switchboard, locomotive. (2) A switch-tender. 2. [Prov Eng] A small stile. 3. A switch-gear, n. A switch-gear.

**switch/ing**, 1 switch/ing, 2 switch/ing, n *pp* & *verb* n of switch, *e* — *switch/ing-blip*, n A blip-boob for switching or pruning hedges — *s. engine*, n. See *ENGINE* — *s. eye*, n. *Car-building*. A push-block or a pull-rope for convenience in switching — *s. ground*, n. A ground or yard where cars are switched for making up into trains — *s. neck*, n. (Bahamas) The Louisiana heron (*Ardea herodias*) — *s. plug*, n. The plug of a plug-switch — *s. reclaim* (*Railroad*), n. A daily charge for switching services made by one road against another.

**switch/man**, 1 switch/man, 2 switch/man, n [MEV, pl] One who handles railway-switches, a pointsman.

**switchet**, *pp* Switched. S. S. switch'er, 1 switch'er, 2 switch'er, a 1. [Rmr] Relating to or like a switch. 2. Whisking as a tall.

**switch't**, n Strong, many, also quick switch't.

**switch, 1 switch, 2 switch, add** [Scot or Obs] Strongly, very much, quickly also interjectionally, begone! switch't.

My Lady redees you with return  
 Scott *Lays of the Last Minstrel* can. 4 st. 22.

**swithe**, *er*, 1 swithe, 2 swithe, *er*, n [Prov Eng] To do, to hasten, fear.

**swithe'er**, *er*, [Prov Eng] To scorch, burn.

**swithe'er**, *er*, [Scot] To emit a whirling noise.

**swithe'er**, *er*, [Prov Eng] 1. A state of doubt or hesitation. 2. A fright, perspiration, faint.

**swithe'er**, n *Mining*. A metalliferous crevice making an angle with the principal lode also, a quartering crevice.

**swithe'er**, n 1. [Prov Eng or Scot] A blow throwing down or over. 2. [Prov Eng] A rush, quick movement. 3. An exercise of strength.

**Swith'n**, 1 swith'n, 2 swith'n, n St. (-862) Bishop of Winchester, England canonized only in popular tradition. Swith'n's day, July 15, in connection with which the following tradition survives.

St Swith'n's day, if thou dost rain,  
 For forty days it will remain.  
 St Swith'n a day if thou be fair,  
 For forty days 'twill rain na mair.

**Switz'er**, 1 switz'er, 2 switz'er, n 1. A Swiss. 2. Specif. a Swiss mercenary soldier or member of a Swiss guard, as at the Vatican. [*< G Schweizer, < Schweiz, Switzerland*] *Swiss'er*.

**Switz'er-land**, 1 switz'er-land, 2 switz'er-land, n 1. A federal republic in central Europe 15,964 sq m, capital Bern. See *SWISS CONFEDERATION*. 2. A county in S E Indiana; 225 sq m, county-seat, Vevay.

**swiv'el**, 1 swiv'el, 2 swiv'el, *er* & *n* [SWIV'EL or SWIV'ELLED, SWIV'ELN, SWIV'ELING or SWIV'EL-LING] To turn on or as on a swivel or pivot, or with a swivel.

**swiv'el**, n 1. A coupling device that permits either half to rotate independently of the other a simple connecting mechanism adjusted so as to turn, as a staple welded or secured to a perforated disk that can turn freely about the shank of a hook, or a rest on a boat's gunwale, on which a gun may be swept or swung in a horizontal plane. 2. Something that turns or swings on a pivot, as, a *swivel* hinge, a *swivel* gun.

*Abou Malek* Up, up to the ramparts unnumber the *swivels*. *HEBER Blue-Beard*.

3. A loop through which a check-rein passes, a runner.

4. The shuttle of a ribbon-loom. **swiv'el-shut**, *er*, *n* [*< AS swif'an, revolve*]

— *swiv'el-an-chor*, n. An anchor fitted with a swiveling at the upper end of the shank — *s. har*, n. The bar or rod on a carbine to which the sling is fastened — *s. hock*, n. *Naut*. A block provided with two shells of the same size, placed one above the other, connected by the swivel also, a block provided with a swivel-hook.

— *s. eye*, n. [Slang] An eye, especially a squint-eye, that rolls in the socket — *s. eyed*, *a* — *s. gate*, n. The movable part of a gate-valve which swings across the opening, instead of sliding — *s. gun*, n. A cannon mounted on a swivel — *s. hock*, n. A hook forming part of a swivel, a ring or snap-hook fastened, as to a neck-chain, by a swivel, as for holding a chain — *s. loom*, n. A form of loom, as for ribbon-weaving, having swivels on the batten — *s. musket*, n. Same as *JR GAL* — *s. pipe*, n. A pipe fitted to another with a swivel-joint, as in fire-hose — *s. plate*, n. *Mach*. A circular piece acting as a contact area for another piece turning around it — *s. sinker*, n. A sinker having between it and the snood a swivel permitting the latter and the bait to rotate — *s. table*, n. A table having swivel motion about a central pivot — *s. wear*, n. A wearing process in which shuttles driven by racks and pinions wear figures produced by the filling into the material — *s. weft*, n. This yarn used in swivel-weaving.

**Swiv'el-er**, 1 swiv'el-er, 2 swiv'el-er, *n*. [In Dickens's *Old Curiosity Shop*, n kind vain dissipated, bombastic young man.]

**swiz'le**, 1 swiz'le, 2 swiz'le, *er* [Colloq or Prov] To drink to excess.

structural symmetry, especially as shown in the temple architecture of the Egyptians and in Japanese art.

We find a remarkable instance of what Sir Gardner Wilkinson has ingeniously called the *symmetrophobia* of the Egyptians. This court is bounded on one side by large columns, . . . but on the other side, instead of similar columns we find massive stone pillars. *Manette-Ber. Monuments of Upper Egypt* tr. by A. Manette, pt. III, p. 211 [ra. & co 1877].

*sym'-me-try*, 1 *sim'-tri*; 2 *sym'-try*, n. [-TRIES, 1 -triz; 2 -try, pl] 1. Due arrangement or balancing of the parts or elements of a whole with reference to one another in making up that whole, relative proportion and harmony, hence, loosely, congruity, consistency, harmony, also, an instance of such arrangement or balancing, as, the *symmetries* of Seneca. 2. *Esthetics*. The element of beauty in nature or art that results from such arrangement and balancing, perfection of related forms in the making up of a harmonious whole. In its lower form symmetry may involve only repetition, radiation, simple rhythm, or spacing, but in its higher forms it involves distribution, proportion, congruity and harmony, and free balancing of parts in relation to a totality or whole.

Also to this beauty of proportion is the beauty of *Symmetry*, which is founded more immediately on the relation of the parts of one another. H. N. Dax *Aesthetics* § 72, p. 76 [c c c 1872].

3. *Biol* (1) *Anat* & *Zool* Regular arrangement of parts or organs so that a division will give similar halves, similarity of structure. Symmetry appears in three forms: bilateral, radial, and serial. See these words. (2) *Bot* Equality of number in the whorls of a flower, as of sepals, petals, etc. See SYMMETRICAL.

4. *Math* An arrangement of pairs of points in a general system such that the set of lines joining them together is divided into equal parts by a line (the axis of symmetry), or by a plane (plane of s.), or by a point (the center of s.).

5. *Crystal* The symmetrical distribution of non-parallel but equivalent directions (faces, edges, etc.) in a crystal with reference to certain planes or lines called *planes* or *axes of symmetry*. The grade of symmetry is determined by the number of non-parallel equivalent directions which a given crystal possesses. There are only thirty-two crystal classes possible having different grades of symmetry.

6. [Archaeol] Beauty, comeliness, fine appearance. [*F* *symétric*, < *L* *symmetria*, < *Gr* *symmetria*; see SYMMETRICAL] *Sym'* agreement, conformity, harmony, order, parity, proportion, regularity, stappleness. See HARMONY.

Ant. deformity, discordance, disproportion, shapelessness. — *axial symmetry*, the symmetry produced when to every point or part of a body or figure on one side of a line called the axis of symmetry corresponds a like point or part at an equal distance on the other side of the line.

— *axial symmetry*, the symmetry of a body in which the property of remaining the same after transposition, that is, the first for the second, the second for the third, and so on — *kinetic s.*, equality of the moments of inertia of a body about all axes through the center of inertia — *respective s.*, symmetry in which only the opposite sides are equal — *right s.*, symmetry in which the lines joining corresponding points are at right angles to the plane or axis of symmetry — *skew s.*, the symmetry of hemihedral crystals, as of the trigonal or tetrahedral crystals — *s. as to a plane*, the symmetry produced when every point or part on one side of a plane has a corresponding point or part at an equal distance on the other side.

*sym'morph'*, 1 *sim'mor'*; 2 *sym'mor'*, n. A character differing in form from another or others, but standing for the same notion. Compare HOMOMORPH. [*Gr* *sym-morphos*, similar, < *syn* with, + *morphē*, form]

*sym-pal'mo-graph'*, 1 *sim-pal'mo-graf*; 2 *sym-pal'mo-graf*, n. An instrument for the composition of two harmonic motions by means of a pendulum vibrating about two horizontal axes. [*sym* + *Gr* *palmos*, vibration, + *-GRAPH*]

*sym'-pa-thet'ic*, 1 *sim-pa-thet'ic*; 2 *sym-pa-thet'ic*, a. 1. Pertaining to, resulting from, or attended by sympathy, as, expressive of sympathy, as, *sympathetic aid*, *sympathetic verses*. 2. Having like feelings with another or others, susceptible of sympathy, sympathizing, as, a *sympathetic person*. 3. Being in accord or harmony, concordant, congenial. 4. *Physiol* Pertaining to, dependent upon, or proceeding from sympathy; as, *sympathetic disturbance* of an organ or part, due to some morbid reaction of another organ, primarily diseased. 5. Suggestive of or acting as if through sympathy, as, *sympathetic ink*. And see a mine in China here.

— *sympathetic headache*, headache due to disturbance in some other part of the system — *s. nerve*, a nervous cord, formed of filaments derived from the spinal nerves, that connects a series of ganglia situated on either side of the spine — *s. nervous system*. 1. The nervous system formed by the sympathetic nerve with its ganglia, the branches which it sends to the viscera, and the plexuses which they form. The sympathetic system embraces (1) a central part consisting of a series of ganglia situated each side of the spine and connected by a nervous cord, (2) nerves that pass from this chain to the viscera, and (3) plexuses formed by these nerves either about the vessels or within the substance of the viscera, which plexuses contain numerous small ganglia. 2. A nerve branching from the cerebral ganglion in invertebrates, and believed to correspond to the sympathetic nervous system of vertebrates — *s. numbers*, numbers supposed to have a natural tendency to occur together — *s. powder*, powder formerly supposed to have the property of curing a wound if applied to the weapon inflicting it or to a piece of the blood-stained garment. — *s. sounds*, sounds produced by sympathetic vibrations.

— *sym'-pa-thet'ic-al-ly*, *adv* — *sym'-pa-thet'ic-dism*, n. A tendency, especially if excessive or morbid, to sympathize with others — *sym'-pa-thet'ic-us*, n. [*ci*, 1 -sal; 2 -ci, pl] The sympathetic nerve.

*sym'-pa-thism*, 1 *sim'-pa-thizm*; 2 *sym'-pa-thizm*, n. Direct and instantaneous communication of subjective sensations, as pain or emotions.

*sym'-pa-thist*, 1 *sim'-pa-thist*; 2 *sym'-pa-thist*, n. [Rare] A sympathizer, also, one susceptible to sympathy.

*sym'-pa-thize*, 1 *sim'-pa-thiz*; 2 *sym'-pa-thiz*, v. [-THIZED; -thiz'ing] 1. To be affected with feelings corresponding to the feelings of another, followed by *with* or *in*, as, the true critic must *sympathize* with the author, to *sympathize* in sorrow or joy. 2. To be stirred to some emotion or put in some mood deemed correspondent with external phenomena; be in harmony with or sensitive to outside influences; as, Wordsworth *sympathized* with the calm of nature.

There are, however, a few men and perhaps Shakespeare stands at their head, who truly *sympathize* with something out of themselves. H. N. Hudson *Lect. on Shakespeare* vol. I, lect. II, p. 66 [a s c 1848].

3. To be affected in one part in consequences of the condition of another part, suffer sympathetically; the eyes *sympathize* with each other.

The digestive organs, unfortunately, are the first to *sympathize* with any mental worry.

N. E. YORKE-DAVIS in *Annals of Hygiene* Sept., 1893, p. 534.

4. [Colloq] To give expression to one's sympathy, as with another's grief or affliction; condole. 5. To be concordant, agree, harmonize. 6. To have similar characters or qualities, be alike.

1. To have or feel sympathy with, share in. 2. To form or contrive with congruity or consistency. 3. To correspond or answer to. [*F* *sympathiser*, < *L* *sympathia*, see SYMPATHY] *sym'-pa-thet'*, n. See CONSOLE.

*sym'-pa-thiz'er* or *-thiz'er*, n. — *sym'-pa-thiz'ing* or *-thiz'ing*, *adv*

*sym'-pa-thy*, 1 *sim'-pa-thi*; 2 *sym'-pa-thy*, n. [-THIES, 1 -thiz, 2 -thiz, pl] 1. The quality or state of being affected with feelings correspondent in kind or relative with those of another person, fellow-feeling.

*Sympathy* is the universal solvent. Nothing is understood without it. ARTHUR HELPS *Friends in Council* first series, vol. I, p. 77 [a s m].

2. Specific, a feeling of compassion for another's sufferings or evils, pity, commiseration; as, *sympathy* with the poor, all misfortune is a claim to *sympathy*. 3. An agreement of affections, tastes, or inclinations, or a conformity of natural temperament, which makes persons agreeable to one another, harmony, accord, as, they are in *sympathy* with each other. 4. *Physiol* (1) The relation of one organ or part with another more or less remote, through which an unaffected organ or part becomes secondarily disordered from disease existing in some other part without actual transmission of the morbid cause. (2) The quality or state of transmitting certain physiological conditions of one person to others, as in hysteria, yawning, etc.; distinguished from *protopathy*, or direct experience, etc. See EMPATHISM. 5. That quality of inanimate things by virtue of which they attract, influence, or tend toward one another, or are supposed to do so, affinity, a sense once much used in alchemy and astrology, as, the *sympathy* of the lodestone for iron. 6. *Physics* A relation between two bodies such that the vibration of one causes a sympathetic vibration of the other. 7. Correspondence, agreement, also, suggestive association. [*L* *sympathia*, < *Gr* *sympatheia*; see SYMPATHETIC]

Still, see BENEVOLENCE, PITY — *Prep*: sympathy with another (in joy or grief, sympathy for the needy in their distress, sympathy between kindred spirits — organic sympathy (*Psychol*), the sympathetic feeling between those of the same species which is instinctive and unreflective — reflective s., the sympathy which results from reflection and is motivated by moral and social considerations.

*sym-pel'mous*, a. *Ornith* Having the deep flexor tendons all in one prior to their extension to each of the four digits; opposed to *schizopel'mous* *sym-pel'mous'*.

Bot Having united petals, gamopetalous — *sym'-phe-nom'-e-on*, n. [*pe*, n. pl] A phenomenon resembling or accompanying another phenomenon exhibited by the same object — *sym'-phe-nom'-e-on-al*, a.

*sym'-phili'*, 1 *sim'-phi*; 2 *sym'-phi*, n. Bot Commensalism with manifestation of mutual sympathy, as in the case of some ants and other insects which are their welcome guests. [*Gr* *sympheilia*, mutual friendship] *sym'-phism*, n. — *sym'-phism'*, a.

*sym-pho-ni-a*, 1 *sim'-fo-ni-a*; 2 *sym'-fo-ni-a*, n. Same as SYMPHONY. 2. In ancient Greek music, concord, consonance. [*L*, < *Gr* *symphonia*; see SYMPHONIOI].

*sym-pho-ni-c'*, 1 *sim'-fo-nik*; 2 *sym'-fo-nik*, a. 1. Of, pertaining to, or characterized by sympathy, symphonious. 2. *Mus* Pertaining to or resembling a symphony. First to fourth. 3. Of the same sound as words, homony-tous.

*sym-pho-ni-cet'* — *sympheonic* poem, an orchestral composition in symphonic style, illustrating a poetic idea, but not divided into separate movements.

*sym-pho-ni-on*, 1 *sim'-fo-ni-on*; 2 *sym'-fo-ni-on*, n. A former musical instrument combining the characters of the piano-forte and the harmonium. [*Gr* *symphonia*, symphony, < *syn*, together, + *phōnē*, sound]

*sym-pho-ni-ous*, 1 *sim'-fo-ni-us*; 2 *sym'-fo-ni-us*, a. 1. [Archaeol] Marked by symphony, characterized by harmony of sound. 2. Pertaining to a symphony, symphonious — *sym-pho-ni-ous-ly*, *adv*

*sym-pho-nist*, 1 *sim'-fo-nist*; 2 *sym'-fo-nist*, n. One who composes symphonies.

*sym-pho-nize'*, *vi* & *tr* To harmonize, bring into sympathy, agree *sym-pho-nise*.

*sym-pho-ny*, 1 *sim'-fo-ni*; 2 *sym'-fo-ni*, n. [-NIES, 1 -niz, 2 -niz, pl] 1. A harmonious or agreeable mingling of sounds, whether vocal, instrumental, or both used figuratively of concord, harmony, or agreeable blending of any kind, as, *symphonies* in gray; a lyric *symphony*. 2. *Mus* (1) A sonata for an orchestra. (2) An instrumental prelude, interlude, or postlude; a ritornello.

*Symphonies*, up to the 17th century, were instrumental passages thrown into relief in works where interest centered chiefly in the vocalization. The development of orchestral features and ritornelli gave rise to that highest form of instrumental composition now known as the symphony. Haydn was the first to evolve the classic standard of four movements (generally designated as allegro, andante, scherzo, and finale) which Mozart and especially Beethoven developed to the highest perfection. The greatest modern symphonists are Schubmann and Brahms. Liszt gave himself more freedom of form and movement, calling his productions symphonic poems. See SONATA.

3. One of several distinct musical instruments, as the virginal, hurdy-gurdy, or bagpipe. [*F* *symphonie*, < *L* *symphonia*, see SYMPHONIA] — *pastoral symphony* (*Yus*), a movement suggesting manifestations of nature, such as trees, flowers, and stars, also country dwellers and their occupations, as for example, the watch of the shepherds in the Messiah — *toy or klinder s.*, a symphony intended for performance on toy instruments.

*Sym'-pho-ri-car'pos*, 1 *sim'-fo-ri-kar'pos*; 2 *sym'-fo-ri-kar'pos*, n. The word *synthesis* for this mental activity is employed and defended by Wundt who justly objects to the word 'association' and the theories which have used the word because of their concealment of the truth that the process imparts new properties to its product.

G T Ladd *Elements of Phys Psych* p 388 note [in 1887].

4. Logic (1) Combination of separate elements into a whole, as of species into genera, synthetic construction of knowledge. (2) Specif, and in stricter use, a process of reasoning from the whole to a part, or from the general to the particular. In this sense the word is used also in mathematics, where the chief use of synthesis is in the ordinary form of geometry. See DEDUCTIO, INDUCTIO.

5. Surg The operation of reuniting broken or divided parts either of the bones or of soft portions of the body. (1) The union of divided parts remaining adjacent, as the *synthesis* of the edges of a wound or the fractured ends of a broken bone. *Synthesis* of continuity. (2) The reduction of displaced organs, as, *synthesis* of hernia, falling womb etc. *Synthesis* of continuity.

6. Chem The combination of elements or radicals in such proportions as to form compounds, specif, the preparation by artificial means of such compounds as, prior to 1828 (when Wöhler prepared urea artificially), were regarded as solely the product of natural processes, as, alizarin and indigo, formerly obtained only from plants, are now made by *synthesis* from coal-tar.

7. Kantian Philo The organization of the manifold, as of the data of sense, under some a priori unifying form of mental activity, as, the *synthesis* of what is sensuously given in a varied way under the concepts of space and time.

The concept of connection includes besides the concept of the manifold and the *synthesis* of it the concept of the units of the manifold. See CONNECTION, the *synthesis* of the manifold.
